Abstract – Conveyor system is a part of material handling system, which is used for transportation of material, the main application of conveyor system is for transportation. There are many types of conveyor system are there and we have various needs by them like mining, power generation port systems, grain handling etc. Though these conveyors have numerous advantages they also require huge amount of power to drive belts. As the result of increased fuel prices in global markets and scarce of fuel electricity tariffs are increasing tremendously. By using vertical axis wind turbine to drive these belts we can save huge amounts of electrical energy / money as well as reduce greenhouse gas emission.

Key Words: conveyor, Shaft, gears, bearings, vertical axis wind turbine

1. INTRODUCTION

The device which converts wind's kinetic energy in to electric energy is known as wind turbine [1]. These wind turbines are mostly used for generation of electricity [2]. The generated electricity stored in the form of batteries. There are two types of wind turbine namely vertical axis wind turbine and horizontal axis wind turbine [3]. In vertical axis there are two types namely VAWT savonius and VAWT darrieus. With the help of wind turbine we can draw water from underground levels. With the help of wind turbine we can run conveyor systems. Conveyor system it is a part of material handling. It is used for the transportation of materials from one place another place. Though conveyor require electric energy to run, we can make conveyor run by using wind turbine, this can be done using gear mechanism between conveyor and wind turbine. By this we can say that direct energy transformation takes place i.e. from mechanical energy to mechanical energy

2. Methodology:

2.1 Fabrication of "vertical axis wind turbine"(VAWT) driven belt conveyor

System: First we have to fabricate the vertical axis wind turbine and next conveyor system.

2.2 Preparation of angles:

- To prepare the wind turbine we take the angles.
- Angles are used to support the wind turbine
- The material used is mild steel
- The angles are fabricated using cutting machine
- The length of angles 4*1000mm
- The length of angles 4*1200mm
- The grinding work is done on particular bases.

2.3 Preparation of flats:

- The material used in preparation of arm is mild steel
- The arms are in flat shape
- The length of arms are 375mm*12nos., width 17mm, thickness 3mm
- This whole operation is done using cutting machine
- Grinding work is done on particular bases.
