term electronics covers several fields known in Soviet classification as electronics proper radio engineering and wire communication The entries included in this dictionary have been selected in accordance with the international understanding of the term electronics One of the main difficulties encountered by the compilers was that although according to some calculations the number of terms used in special literature on electronics exceeds 50 000 the vocabulary of the dictionary had to be restricted to only 9 000 entries Therefore this dictionary cannot claim to be comprehensive Its purpose is to enable a wide range of specialists in various countries to find the English German French Dutch or Russian equivalents of the principal and most up to date terms in the field of electronics Most attention has been paid to quantum electronics fibre optics optoelectronics integrated circuit technology radiolocation and radionavigation pulse technique holography etc
