In the **Final State**.... Iodine enters the cell and Glucose leaves the cell. Starch cannot leave the cell, since Starch molecules are too large. The cell turns a blue/black color due to the iodine (Starch indicator) and the Starch reacting with each other. Starch (milky white) + starch indicator (brown) = blue-black color. The inside of the bag turns blue-black while the outside stays brown, proving that indicator went in, but starch did not leave.

Glucose indicator (Benedict's) (blue) + glucose (clear) + HEAT = green, brown, red, or orange

Diffusion - movement of molecules from a region of high concentration to a region of low concentration - no energy needed (passive transport)

Osmosis - diffusion of water across a semipermeable cell membrane from region of high concentration to a region of low concentration - no energy needed (passive transport)

Onion Slide: Make a wet mount slide of a thin section of red onion cells. A small piece is placed in a drop of water on a microscope slide. A cover slip is placed on top by touching it to the water at an angle, and then carefully placing it on the specimen, trying not to get air bubbles underneath.

You should observe the following:

Place a 10% salt solution under the cover slip. This is done by putting a drop of salt solution next to one edge of the cover slip.
