counts Does the Social Security Earnings Test Affect Labor Supply and Benefits Receipt? Jonathan Gruber, Peter R. Orszag, 2000 The Social Security earnings test a version of which still applies to those ages 62-64 reduces immediate payments to beneficiaries whose labor income exceeds a given threshold Although benefits are subsequently increased to compensate for any such reduction the earnings test is typically perceived as a tax on working As a result it is considered by many to be an important disincentive to paid work for older Americans Yet there is little evidence to suggest an economically significant effect of the earnings test on hours of work and almost no research on the effect of the test on the decision to work at all We investigate these issues using the significant changes in the structure of the earnings test over the past 25 years using data over the past 25 years using data over the 1973-1998 period from the March Supplement to the Current Population Survey CPS which provide large samples of observations on the elderly Our analysis suggests two major conclusions First the earnings test exerts no robust influence on the labor supply decisions of men Neither graphical analyses of breaks in labor supply trends nor regression estimates that control for underlying trends in labor supply by age group reveal any significant impact of changes in earnings test parameters on aggregate employment hours of work or earnings for men For women there is more suggestive evidence that the earnings test is affecting labor supply decisions Second loosening the earnings test appears to accelerate benefits receipt among the eligible population lowering benefits levels and heightening concerns about the standard of living of these elderly at very advanced ages Our findings suggest some cause for caution before rushing to remove the earnings test at younger ages **The Economics of Women, Men, and Work**

Francine D. Blau, Marianne A. Ferber, Anne E. Winkler, 1998 This single highly accessible volume explores the most current summary and synthesis of research and data from economics and the social sciences on women men and work in the labor market and household Women and Men Changing Roles in a Changing Economy The Family as an Economic Unit The Allocation of Time Between the Household and the Labor Market Differences in Occupations and Earnings Overview Differences in Occupations and Earnings The Human Capital Model Differences in Occupations and Earnings The Role of Labor Market Discrimination Recent Developments in the Labor Market Their Impact on Women and Men Changing Work Roles and the Family Policies to Balance Paid Work and Family Gender Differences in Other Countries Economists Sociologists Social Workers Demographers Policy Analysts Labor Market Analysts Also of interest to noneconomists and students who would like to learn about gender issues in the workplace and in the family but have little if any prior background in economics Publisher **Current Law Index** , 2007 Aanwinsten van de Centrale Bibliotheek

(Queteletfonds) Bibliothèque centrale (Fonds Quetelet), 1994 **What to Do about the Social Security Earnings Test?** Jonathan Gruber, 1999 *Working Paper Series* , 2000 **Law Books Published** Meira G. Pimsleur, 1973 Cumulated Index to the Books , 1999 Induced Retirement, Social Security, and the Pyramid Mirage Casey B. Mulligan, 2000 Does Social Security redistribute across cohorts Or is it a program for purchasing the jobs of the elderly I formalize both models

showing how they have some predictions in common the most important of which is that generational accounts have the appearance of a pyramid scheme I also derive important differences between the two interpretations and compare those differences with data on the design and incidence of Social Security programs around the world Since implicit and explicit tax rates on elderly labor income are so high and so closely and positively related with the amount of Social Security spending and because substitution effects of the program can be as large as its wealth effects I conclude that Social Security's induced retirement motive is much more important for explaining differences among European countries than is the intergenerational redistribution motive Furthermore when policy at least in part designed to induce retirement its generational incidence can be very different than the incidence of a pyramid scheme even for those countries where the induced retirement motive is not the dominant one The possibility of induced retirement also makes it difficult for perpetual intergenerational redistribution to be supported as a subgame perfect political equilibrium
