Julia Programming For Operations Research A Primer On Computing:

Julia Programming for Operations Research Changhyun Kwon, 2019-03-03 Last Updated December 2020 Based on Julia v1.3 and JuMP v0.21 The main motivation of writing this book was to help the author himself He is a professor in the field of operations research and his daily activities involve building models of mathematical optimization developing algorithms for solving the problems implementing those algorithms using computer programming languages experimenting with data etc Three languages are involved human language mathematical language and computer language His team of students need to go over three different languages which requires translation among the three languages As this book was written to teach his research group how to translate this book will also be useful for anyone who needs to learn how to translate in a similar situation The Julia Language is as fast as C as convenient as MATLAB and as general as Python with a flexible algebraic modeling language for mathematical optimization problems With the great support from Julia developers especially the developers of the JuMP Julia for Mathematical Programming package Julia makes a perfect tool for students and professionals in operations research and related areas such as industrial engineering management science transportation engineering economics and regional science For more information visit <http://www.chkwon.net/julia>

Explorations In Numerical Analysis And Machine Learning With Julia James V Lambers, Amber C Sumner Mooney, Vivian Ashley Montiforte, James Quinlan, 2025-08-21 The textbook is an expansion of *Explorations in Numerical Analysis* that includes new chapters covering topics from machine learning It is intended for advanced undergraduate and early graduate students with a focus on the connections between numerical analysis and machine learning Topics covered include computer arithmetic error analysis solution of systems of linear equations by direct and iterative methods least squares problems eigenvalue problems nonlinear equations optimization polynomial interpolation and approximation numerical differentiation and integration ordinary differential equations partial differential equations machine learning classification regression and neural networks Each problem is presented with derivations of solution techniques analysis of their efficiency accuracy and robustness and detailed implementation using the Julia programming language This book is suitable for a year long course in numerical analysis or for a one semester course in numerical linear algebra Part II or machine learning Part VI

Network Optimization Julia Pahl, Torsten Reiners, Stefan Voß, 2011-06-03 This book constitutes the refereed proceedings of the 5th International Conference on Network Optimization INOC 2011 held in Hamburg Germany in June 2011 The 65 revised full papers presented were carefully reviewed and selected from numerous submissions The papers highlight recent developments in network optimization and are organized in the following topical sections theoretical problems uncertainty graph theory and network design network flows routing and transportation and further optimization problems and applications energy oriented network design telecom applications location maritime shipping and graph theory
