Recent Advances in Computer Vision Mahmoud Hassaballah, Khalid M. Hosny, 2018-12-14 This book presents a collection of high quality research by leading experts in computer vision and its applications Each of the 16 chapters can be read independently and discusses the principles of a specific topic reviews up to date techniques presents outcomes and highlights the challenges and future directions As such the book explores the latest trends in fashion creative processes facial features detection visual odometry transfer learning face recognition feature description plankton and scene classification video face alignment video searching and object segmentation It is intended for postgraduate students researchers scholars and developers who are interested in computer vision and connected research disciplines and is also suitable for senior undergraduate students who are taking advanced courses in related topics However it is also provides a valuable reference resource for practitioners from industry who want to keep abreast of recent developments in this dynamic exciting and profitable research field

Methods for Appearance-based Loop Closure Detection Emilio Garcia-Fidalgo, Alberto Ortiz, 2018-03-14 Mapping and localization are two essential tasks in autonomous mobile robotics Due to the unavoidable noise that sensors present mapping algorithms usually rely on loop closure detection techniques which entail the correct identification of previously seen places to reduce the uncertainty of the resulting maps This book deals with the problem of generating topological maps of the environment using efficient appearance based loop closure detection techniques Since the quality of a visual loop closure detection algorithm is related to the image description method and its ability to index previously seen images several methods for loop closure detection adopting different approaches are developed and assessed Then these methods are used in three novel topological mapping algorithms The results obtained indicate that the solutions proposed attain a better performance than several state of the art approaches To conclude given that loop closure detection is also a key component in other research areas a multi threaded image mosaicing algorithm is proposed This approach makes use of one of the loop closure detection techniques previously introduced in order to find overlapping pairs between images and finally obtain seamless mosaics of different environments in a reasonable amount of time

Intelligent Imaging and Analysis DaeEun Kim, Dosik Hwang, 2020-03-05 Imaging and analysis are widely involved in various research fields including biomedical applications medical imaging and diagnosis computer vision autonomous driving and robot controls Imaging and analysis are now facing big changes regarding intelligence due to the breakthroughs of artificial intelligence techniques including deep learning Many difficulties in image generation reconstruction de noising skills artifact removal segmentation detection and control tasks are being overcome with the help of advanced artificial intelligence approaches This Special Issue focuses on the latest developments of learning based intelligent imaging techniques and subsequent analyses which include photographic imaging medical imaging detection segmentation medical diagnosis computer vision and vision based robot control These latest technological developments will be shared through this Special
