American Society for Composites Michael Hyer, Suong Hoa, Ozden Ochoa, Mehdi Hojjati, 2011-06-28 *Sustainable Composites for Lightweight Applications* Hom Nath Dhakal, Sikiru Oluwarotimi Ismail, 2020-11-22 Carbon and glass fibre reinforced composite materials have been used for many years in several different types of applications. However, these conventional composites are derived from non-renewable reinforcements and they pose a significant threat to the environment. Government legislation and consumer behaviour have recently forced many industries to adapt sustainable composites. Industries such as automotive, marine and aerospace are now seeking sustainable lightweight composites with the aim to reduce the overall weight of the components with enhanced materials and design aspects. Therefore, there is high demand on research for the development of sustainable lightweight composites. This book presents a comprehensive review of lightweight composites with the central aim to increase their use in key industrial sectors such as automotive, marine and aerospace. There is no such book currently available that is dedicated to sustainable lightweight applications covering important topics such as key drivers for lightweight composites, mechanical properties, damage characterisation, durability and environmental aspects. Key topics that are addressed include: The roles of reinforcements and matrices in composite materials; Sustainable natural fibre reinforcements and their morphological structures; Lightweight applications and properties requirements; Design manufacturing processes and their effects on properties; Testing and damage characterisation of composite materials; Sustainable composites and techniques for property enhancement; Future trends and challenges for sustainable composites in lightweight applications. It will be a valuable reference resource for those working in material science, polymer science, materials engineering and industries involved in the manufacture of automotive and aerospace components from lightweight composite materials. Provides a comprehensive review of sustainable lightweight composites looking at key industrial applications such as automotive, marine and aerospace and construction. Important relationships between structure and properties are analysed in detail. Enhancement of properties through hybrid systems are also explored with emphasis on design, materials selection and manufacturing techniques.

The Tech Behind Concept Cars Matthew Allan Chandler, 2019-08 Is that a new space vehicle with wheels? No, it's a concept car stuck in traffic. No problem. One concept car has a drone-like device that can lift it into the air. Looking for a car that gets to know you like a friend? Look no further than a car with an artificial intelligence system that can sense your feelings. Have a need for speed? Enter fully electric concept cars that boast 350 horsepower. Take young readers on a journey through the technology that makes concept cars so amazing.

Lean Development and Innovation Luciano Attolico, 2018-09-06 Using Toyota's principles for product and process development, this book focuses on the implementation of the Lean system during the past 10 years in dozens of corporations across various industries. The book highlights all steps on the journey from common trouble area to remarkable results. As it is written by a manager for other managers, it contains real work discoveries and insights.

The author provides case studies from many different fields of application. The reader gains insight on US and European companies that successfully streamlined their innovation and product development processes. These companies have overcome difficult periods and major challenges thanks to the ability to innovate with new Lean methodologies and above all a new workplace culture and mindset. The goal of this book is to help managers successfully apply Lean principles in the innovation and development area of their company while benefitting from the author's lessons learned during his many years of capitalized experience. This book provides a comprehensive framework that supports step by step the successful application of Lean principles in the innovation and development areas of the company. Readers learn how to drastically reduce the time required to develop products and discover and eliminate hidden costs and critical waste while increasing value for customers.

Automotive Carbon Fiber Composites Jackie D

Rehkopf, 2011-11-29 The development of new materials that are technically and economically viable is no small endeavor. The risks, costs, and time involved in research are usually so high that only governments or private consortia can bear them. And so it has been with the trajectory of carbon fiber reinforced composites which are capable of providing the lightweighting needed for fuel efficiency and the mechanical strength required for safety. After a long development cycle, this material is now being widely used by the military in commercial aircraft and in the automotive industry. **Automotive Carbon Fiber Composites From Evolution to Implementation** written by Dr Jackie Rehkopf, senior researcher at Plasan Carbon Composites, gives a high level summary on carbon reinforced fiber composites specific to the automotive industry in today's market and its vision for the next 5 to 10 years. It begins with a comprehensive and easy to read overview of how composites started to be investigated as a possible alternative to metals, mostly driven by military demands, going on to cover fiber and resin types for automotive applications, composite constructions, manufacturing processes, machining and joining, reclaiming and recycling of these materials, among other topics. The title approaches the future with the realistic optimism of those who work with the challenges of creating new solutions to problems that will stay with us for some time to come: the need to conserve energy and make transportation ever more affordable without the loss of safety. Carbon fiber reinforced composites have demonstrated real value in positively addressing these issues. **Automotive Carbon Fiber Composites From Evolution to Implementation** is an excellent guide for those involved in technical material strategy and research as well as those who need to understand the basics of this subject to support better business decisions.
