Discussion Paper On Alternative Transit Technologies:

Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world s leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change

Routledge International Handbook of Sustainable Development Michael Redclift, Delyse Springett, 2015-03-02 This Handbook gives a comprehensive international and cutting edge overview of Sustainable Development. It integrates the key imperatives of sustainable development namely institutional, environmental, social and economic and calls for greater participation, social cohesion, justice and democracy as well as limited throughput of materials and energy. The nature of sustainable development and the book's theorization of the concept underline the need for interdisciplinarity in the discourse as exemplified in each chapter of this volume. The Handbook employs a critical framework that problematises the concept of sustainable development and the struggle between discursivity and control that has characterised the debate. It provides original contributions from international experts coming from a variety of disciplines and regions including the Global South. Comprehensive in scope it covers amongst other areas: Sustainable architecture and design, Biodiversity, Sustainable business, Climate change, Conservation, Sustainable consumption, De-growth, Disaster management, Eco-system services, Education, Environmental justice, Food and sustainable development, Governance, Gender, Health, Indicators for sustainable development, Indigenous perspectives, Urban transport. The Handbook offers researchers and students in the field of sustainable development invaluable insights into a contested concept and the alternative worldviews that it has fostered. *Jersey City, Hudson River Waterfront Transportation Corridor Improvements, Hudson-Bergen Light Rail Transit System (HBLRTS), Hudson County, Bergen County*, 1996

City Centre Planning and Public Transport Barry J. Simpson, 2021-05-11 Originally published in 1988 the central issue of this book is city centre decline and the potential of adequate planning and transport for halting and reversing this decline. A highly topical international study it examines the effects of public transport policies on the central areas of several British cities and those in the former West Germany and France. A series of in-depth case studies deals with the structure of central and local government and the operation of town and transport planning in each country. The book discusses the principles, legislation and practice of physical planning in city centres. It will be of interest to those concerned with urban and transport planning. Transport and Environment Eran Feitelson, E. T. Verhoef, 2001-01-01 The impact of transport on the environment is a major issue of worldwide concern. This important new book presents state of the art contributions on spatial and technological aspects of transport in relation to environmental degradation together with analysis of sustainable transport policy.
