Drying And Storage Of Grains And Oilseeds:

Drying and Storage Of Grains and Oilseeds Donald B. Brooker, F.W. Bakker-Arkema, Carl W. Hall, 1992-01-31 This text and reference discusses the drying of grains in particular the staple cereals maize rice and wheat and the oilseeds soybeans and canola The basic physical and thermodynamic properties of grain and air are examined and the theory of the drying process is developed Design of the optimum operating conditions for on farm and off farm dryers are presented The book is written as an engineering text but should also prove beneficial to all who are interested in the proper drying and storage of grains Examples and problems are given in both S I and Imperial units **Handbook of Postharvest Technology** Amalendu Chakraverty, Arun S. Mujumdar, Hosahalli S. Ramaswamy, 2003-01-22 The Handbook of Postharvest Technology presents methods in the manufacture and supply of grains fruits vegetables and spices It details the physiology structure composition and characteristics of grains and crops The text covers postharvest technology through processing handling drying and milling to storage packaging and distribution Additionally it examines cooling and preservation techniques used to maintain the quality and the decrease spoilage and withering of agricultural products Cereal Grain Quality R. Henry, P. Kettlewell, 2012-12-06 Cereals range from human food and beverages to animal feeds and industrial products It is human food and beverages which are the predominant uses covered in this book since the nutritional quality of cereals for animal feed is described in other publications on animal nutrition and industrial products are a relatively minor use of cereals Cereals are the main components of human diets and are crucial to human survival Three species wheat rice and maize account for the bulk of human food Barley is the major raw material for beer production and ranks fourth in world production Other species such as sorghum are regionally important This book covers all the major cereal species wheat rice maize barley sorghum millet oats rye and triticale Specific chapters have been devoted to a description of the major end uses of each of the species and to definition of the qualities required for each of their end uses The functional and nutritional quality of cereals determines their suitability for specific purposes and may limit the quality of the end product influencing greatly the commercial value of grain An understanding of the factors that determine grain quality is thus important in the maintenance of efficient and sustainable agricultural and food production The biochemical constituents of the grain that determine quality have been described in chapters on proteins carbohydrates and other components An understanding of the relationships between grain composition and quality is important in selecting grain for specific uses **ASHRAE Handbook**, 1997 Grains Fuji Jian, Digvir S. Jayas, 2021-12-23 Drying and storage are two significant unit operations in the food industry and are applied to both raw and processed products including cereal grains oilseeds legumes flour noodle coffee and cornstarch The common characteristic of these materials is that all of them are hygroscopic and contain water The hygroscopic properties are influenced by their physical properties which are influenced by their storage environments such as bins warehouses bunkers and temporary storage structures This book focuses on the storage and drying of bulk products
