Dynamic Response of Granular and Porous Materials under Large and Catastrophic Deformations Kolumban Hutter, Nina Kirchner, 2003-03-24 A Sonderforschungsbereich SFB is a programme of the Deutsche Forschungsgemeinschaft to financially support a concentrated research effort of a number of scientists located principally at one University Research Laboratory or a number of these situated in close proximity to one another so that active interaction among individual scientists is easily possible. Such SFB are devoted to a topic in our case Deformation and Failure in Metallic and Granular Materials and financing is based on a peer reviewed proposal for three now four years with the intention of several prolongations after evaluation of intermediate progress and continuation reports. An SFB is terminated in general by a formal workshop in which the state of the art of the achieved results is presented in oral or I and poster communications to which also guests are invited with whom the individual project investigators may have collaborated. Moreover a research report in book form is produced in which a number of articles from these lectures are selected and collected which present those research results that withstood a rigorous reviewing process with generally two or three referees. The theme deformation and failure of materials is presented here in two volumes of the Lecture Notes in Applied and Computational Mechanics by Springer Verlag and the present volume is devoted to granular and porous continua. The complementary volume Lecture Notes in Applied and Computational Mechanics vol 10 Eds K HUTTER H

Poromechanics III - Biot Centennial (1905-2005) Younane N. Abousleiman, Alexander H.-D. Cheung, Franz-Josef Ulm, 2005-05-01 These proceedings represent the latest advances in the mechanics of porous materials known as

poromechanics The porous materials considered are solids containing voids that are impregnated with fluid The focus is on the mechanical interactions of the inhomogeneous solid with the single or multi phase fluid under the loading of mechanical force fluid pressure thermal chemical and magnetic fields The response time can be in static diffusional and dynamic ranges The length scale can start from nano to micro macro and up to field scales Its application covers many branches of science and engineering including geophysics geomechanics composite materials biomechanics acoustics seismicity civil mechanical environmental and petroleum engineering The approaches taken include analytical computational and experimental To honor the pioneering contributions of Maurice A Biot 1905 1985 to poromechanics the Biot Conference on Poromechanics was convened for the first time in Louvain la Neuve Belgium in 1998 The success of the first conference led to the 2nd Biot Conference held in Grenoble France in 2002 To celebrate the centennial birthday of Biot May 25 2005 the 3rd Biot Conference on Poromechanics was held at the University of Oklahoma Norman Oklahoma U S A on May 24 27 2005

An Introduction to Fluid Mechanics Chung Fang, 2018-12-31 This textbook provides a concise introduction to the mathematical theory of fluid motion with the underlying physics Different branches of fluid mechanics are developed from general to specific topics At the end of each chapter carefully designed problems are assigned as homework for which selected fully worked out solutions are provided This book can be used for self study as well as in conjunction with a course in fluid mechanics

Recent Developments of Soil Mechanics and Geotechnics in Theory and Practice Theodoros Triantafyllidis, 2019-08-20 This book provides essential insights into recent developments in fundamental geotechnical engineering research Special emphasis is given to a new family of constitutive soil description methods which take into account the recent loading history and the dilatancy effects Particular attention is also paid to the numerical implementation of multi phase material under dynamic loads and to geotechnical installation processes In turn the book addresses implementation problems concerning large deformations in soils during piling operations or densification processes and discusses the limitations of the respective methods Numerical simulations of dynamic consolidation processes are presented in slope stability analysis under seismic excitation Lastly achieving the energy transition from conventional to renewable sources will call for geotechnical expertise Consequently the book explores and analyzes a selection of interesting problems involving the stability and serviceability of supporting structures and provides new solutions approaches for practitioners and scientists in geotechnical engineering The content reflects the outcomes of the Colloquium on Geotechnical Engineering 2019 Geotechnik Kolloquium held in Karlsruhe Germany in September 2019

Holistic Simulation of Geotechnical Installation Processes Theodoros Triantafyllidis, 2017-01-25 This book provides recent developments and improvements in the modeling as well as application examples and is a complementary work to the previous Lecture Notes Vols 77 and 80 It summarizes the fundamental work from scientists dealing with the development of constitutive models for soils especially cyclic loading with special attention to the numerical implementation In this volume the neo hypoplasticity and the ISA

intergranular strain anisotropy model in their extended version are presented Furthermore new contact elements with non linear constitutive material laws and examples for their applications are given Comparisons between the experimental and the numerical results show the effectiveness and the drawbacks and provide a useful and comprehensive pool for all the constitutive model developers and scientists in geotechnical engineering who like to prove the soundness of new approaches
