Dynamic Investigation of Static Divergence: Analysis and Testing Jennifer Heeg, 2000 The phenomenon known as aeroelastic divergence is the focus of this work The analyses and experiment presented here show that divergence can occur without a structural dynamic mode losing its oscillatory nature Aeroelastic divergence occurs when the structural restorative capability or stiffness of a structure is overwhelmed by the static aerodynamic moment This static aeroelastic coupling does not require the structural dynamic system behavior to cease however Aeroelastic changes in the dynamic mode behavior are governed not only by the stiffness but by damping and inertial properties The work presented here supports these fundamental assertions by examining a simple system a typical section airfoil with only a rotational structural degree of freedom

Signal Processing Techniques for Communication K.C. Raveendranathan, 2024-10-30 The reference text discusses signal processing tools and techniques used for the design testing and deployment of communication systems It further explores software simulation and modeling tools like MATLAB GNU Octave Mathematica and Python for modeling simulation and detailed analysis leading to comprehensive insights into communication systems The book explains topics such as source coding pulse demodulation systems and the principle of sampling and aliasing This book Discusses modern techniques including analog and digital filter design and modulation principles including quadrature amplitude modulation and differential phase shift keying Covers filter design using MATLAB system simulation using Simulink signal processing toolbox linear time invariant systems and non linear time variant systems Explains important pulse keying techniques including Gaussian minimum shift keying and quadrature phase shift keying Presents signal processing tools and techniques for communication systems design modeling simulation and deployment Illustrates topics such as software defined radio SDR systems spectrum sensing and automated modulation sensing The text is primarily written for senior undergraduates graduate students and academic researchers in the fields of electrical engineering electronics and communication engineering computer science and engineering

Lim, Alan V. Oppenheim, 1988 The Regularized Fast Hartley Transform Keith Jones, 2010-03-10 Most real world spectrum analysis problems involve the computation of the real data discrete Fourier transform DFT a unitary transform that maps elements N of the linear space of real valued N tuples R to elements of its complex valued N counterpart C and when carried out in hardware it is conventionally achieved via a real from complex strategy using a complex data version of the fast Fourier transform FFT the generic name given to the class of fast algorithms used for the efficient computation of the DFT Such algorithms are typically derived by exploiting the property of symmetry whether it exists just in the transform kernel or in certain circumstances in the input data and/or output data as well In order to make effective use of a complex data FFT however via the chosen real from complex N strategy the input data to the DFT must first be converted from elements of R to N elements of C The reason for choosing the computational domain of real data problems such as $N \times N$ as this to be C rather than R is due in part to the fact that computing equipment manufacturers have invested so heavily in producing digital signal processing DSP devices built around the design of the complex data fast multiplier and accumulator MAC an arithmetic unit ideally suited to the implementation of the complex data radix 2 butterfly the computational unit used by the familiar class of recursive radix 2 FFT algorithms
