

Sheep Brain Dissection

Objectives:

- List and describe the principal structures of the sheep brain
- Identify important parts of the sheep brain in a preserved specimen

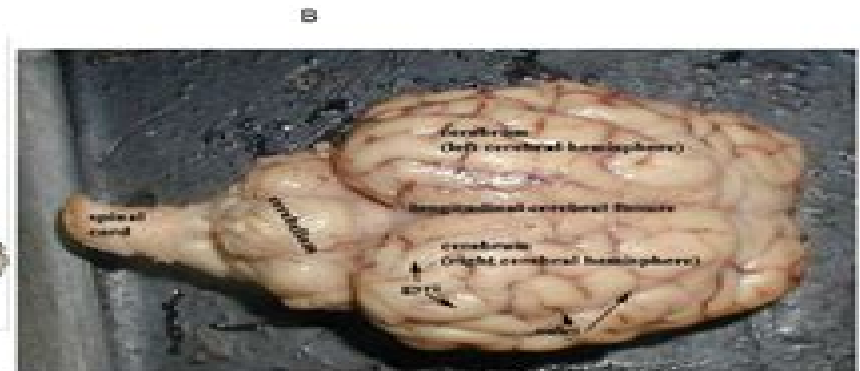

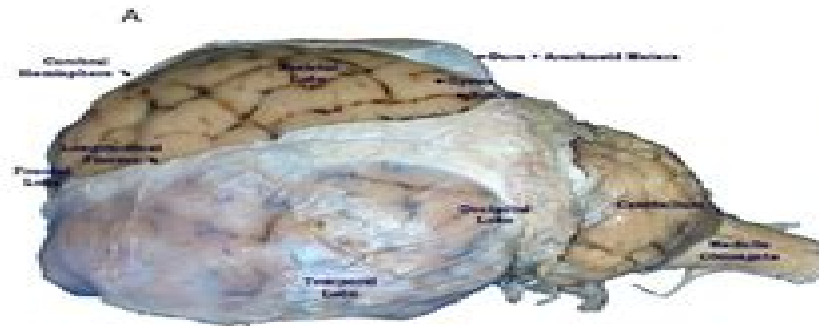

Materials: Dissection tools and trays, lab glasses, lab gloves, preserved specimen

External Sheep Brain

While all mammal brains are similar, as you examine the sheep brain, you will see its similarities and differences to the human brain. The human brain is not only larger and heavier than the sheep brain, but it also has many more ridges (gyri) and contours (sulci). In addition, the human brain has a much larger frontal lobe and cerebellum. On the contrary, the olfactory bulb and the pineal gland are larger in the sheep's brain when compared to the human brain. The sheep brain is also oriented anterior to posterior (horizontally elongated) whereas the human brain is superior to inferior (vertical).

Figure 1 A&B: Sheep brain, external view

1. The tough outer covering of the sheep brain is the **dura mater**, one of three meninges (membranes) that cover the brain. You may need to remove the dura mater to see most of the structures of the brain. ☐
2. The most prominent feature of the brain is the **cerebrum** - which is divided into nearly symmetrical **left and right hemispheres** by a deep **longitudinal fissure**. ☐
3. The surface of the cerebrum is covered with large folds of tissue called **gyri**. The grooves between the gyri are **sulci**. The deeper sulci are often termed **fissures**. The fissures are used as landmarks to divide the surface of the cerebrum (the **cerebral cortex**) into regions. Locate each of the lobes:

☐frontal lobe / ☐parietal lobe / ☐occipital lobe / ☐temporal lobe
