Mathematics for the Mildly Handicapped John F. Cawley, Anne Marie Fitzmaurice-Hayes, Robert A. Shaw, 1988 This textbook for teachers discusses methods of teaching mathematics to mildly handicapped children in the elementary school. The mathematics is restricted to topics appropriate for and attainable by varied groups of handicapped children. Decisions on what, when, and for how long to teach are more crucial than how to teach. The first two chapters discuss selected characteristics of mildly handicapped children and their meaning for learning. Chapter 3 concerns space, spatial relations, and figures, which has been found to be among the easiest areas of mathematics for mildly handicapped children. Chapter 4 concerns prenumber content, followed by chapters on whole numbers, the operations with whole numbers, fractions, measurement, problem solving related to word problems, and problem solving with divergent considerations. Chapters on assessment and on multimedia materials conclude the text. References and an index are included. MNS *Proceedings of the ... International Conference for the Psychology of Mathematics Education*, 1988 **New Ways in Numbers**, 1964 **Math Matters** Suzanne H. Chapin, Art Johnson, 2000 Written to help teachers deepen their understanding of the mathematics they teach, the authors present a concise description of the mathematical ideas encountered in the elementary grades. Each of the book's 13 chapters focuses on an important math topic, and interspersed throughout each chapter are many activities that bring to life the mathematical information presented. **Family Involvement Activities** Harcourt Harcourt School Publishers, 2002-04
