Hereafter DR.Haitham Talaat,2022-01-01 I present this project to all the students of religious knowledge and all the seekers of truth be they Arabs or non Arabs Muslims or non Muslims believers or atheists for indeed the arguments presented in these books are a discourse to everyone regardless of race and intellectual or religious orientation The books of this series are written in a somewhat simple lanuguage yet they require a careful reading of their concise paragraphs for they are not a mere presentation of information but an attempt to build consolidated knowledge In fact instead of deconstructing each misconception on its own I laid the foundation for atheism criticism in order to enhance the reader s certainty of faith rather than indoctrinate him I do not claim that what I have written is flawless for this project is but one tiny step on a long road paved with thousands of arguments Indeed no one can comprehend the marvelous works and the wonders of God s Power and Wisdom or praise Him as He deserves to be praised God says Say If the sea were to become ink to record the Words of my Lord indeed the sea would be all used up before the Words of my Lord are exhausted and it would be the same even if We were to bring an equal amount of ink The Qur an 18 109 I presented the content of these books in a question and answer system in order to facilitate focused attention and information retrieval In addition to the links URLs to the resources that I used the books of this series contain also pictorial illustrations from the research sources so that my argumentation is well documented and readers can easily verify the authenticity and reliability of the data presented Kindly remember me in your good supplications I pray God the Most Generous to make this project beneficial and to reward us all **About Life** Paul S.

Agutter,Denys N. Wheatley,2007-03-06 Thanks to the popular media and to books by Dawkins Fortey Gould Margulis and other writers people are informed about many aspects of biology Everyone seems to know a little about evolution for example and about DNA and the possibilities good and bad afforded by research in molecular genetics Most people know some of the arguments for and against the likelihood of life on other planets And so on We are glad that these pieces of information have

become so widely available However we do not assume any particular knowledge other than the most basic in this book Our aim is to address general questions rather than specific issues We want to enable our readers to join their disparate pieces of knowledge about biology together The most basic of these general questions and perhaps the most difficult can be expressed in beguilingly simple words What is life What does modern biology tell us about the essential differences between living organisms and the inanimate world An attempt to answer this question takes us on a journey through almost the whole of contemporary cell and molecular biology which occupies the first half of the book The journey is worth the effort The provisional answer we attain provides a coherent unifying context in which we can discuss evolution the origin of life extraterrestrial life the meaning of intelligence the evolution of the human brain and the nature of mind *The Catalyst*
