Writing a Biomedical Research Paper Brian Budgell,2008-12-05 All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training It is as if we have been put to sea without a compass Our collective failure to achieve widespread literacy in our own language Biomedical Language seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition It is also a significant personal concern for researchers and clinicians in the highly competitive publish or perish environment of contemporary academia Of course if we are clever or lucky enough to come up with that Nobel Prize winning discovery great science will carry the day and we are likely to get published even if our writing is fairly horrid But most of us who publish are bread and butter scientists We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year For us convincing engaging writing will make the difference between being published or rejected or at least it will make the difference between being published on first submission or having to go through a number of revisions or journals None of this is to propose that good writing can make a silk purse out of a sow's ear Scientific content is the sine qua non of biomedical writing Writing the biomedical research paper, by Stanley M. Garn Stanley Marion Garn, *The 21st*

Century Guide To Writing Articles In The Biomedical Sciences Shiri Diskin,2018-03-09 We live in an unprecedented era of flourishing of scientific publishing However many professionals in the biomedical sciences find writing articles to be a daunting task The book is meant to serve as a practical writing guide that covers the writing process from the project's inception until online distribution of the published article The book covers the framework for constructing a scientific study into a coherent narrative that can later be easily translated into a written manuscript The content of each article section in accordance with the IMRAD format is covered and many details for the construction of additional submission materials are provided Characteristics of papers reporting on specific types of research are presented as well as article types other than the general full research article The book is full of resources for additional reading and learning There are many writing guides on the market Most of them are general cover a wide range of scientific writing and are mainly aimed at students This

book is best suited for young professionals who are a few years out of school. They no longer enjoy the benefit of close mentoring by a thesis adviser or equivalent but still lack the experience to lead writing projects on their own. Through her experience of teaching young professionals and editing their work, Dr Diskin has learned their unique set of needs and the book has been written in an attempt to address them. Dr Diskin addresses the reader in the second person with an ever supportive tone. Importantly, the practicalities of writing articles in today's interconnected environment are discussed throughout the book. Topics such as coordinating the writing in a multinational team, use of different types of software in the writing process, and resources available online to support the writer are addressed in detail.

[The Pathway to Publishing: A Guide to Quantitative Writing in the Health Sciences](#) Stephen Luby, Dorothy L. Southern, 2022-05-30 Writing manuscripts is central to the advance of scientific knowledge For an early career aspiring scientist writing first author manuscripts is an opportunity to develop critical skills and to credential their expertise Writing manuscripts however is difficult doubly so for scientists who use English as a second language Many science students intentionally avoid a writing intensive curriculum Careful thorough reviews of draft manuscripts are difficult to secure and experienced scientific supervisors face more demands on their time than they have time available Weak draft manuscripts discourage supervising scientists investing the time to coach revisions It is easier for experienced scientists to ignore the request or to simply rewrite the article Early career scientists are motivated to address these barriers but specific advice is difficult to find and much of this advice is behind a pay wall This essential open access text presents writing lessons organized as common errors providing students and early career researchers with an efficient way to learn and mentors with a quick reference guide to reviewing Error descriptions include specific examples drawn from real world experiences of other early career writers and suggestions for how to successfully address and avoid these in the future Versions of this book have been used by Stanford University UC Davis Johns Hopkins and numerous international institutions and organizations for over a decade
