the drawing. You are "drawing blind." Elements and development are added incrementally until you are not allowed to look at the drawing. The exercise suggests an intent.

In comparing figures 2.13 and 2.15 the difference in how space between contour and filled contour will be apparent. Because Clark's sketch goes further, it is usually "read" and progressively, in Brunel Clark's drawing of a room, we see increasingly a finished line, and less sketchy mapping and drawing points.

SUMMARY

Visual drawing is foundational. It is a record of the energy that goes into making. It makes a visual connection between the artist and the world of

whether that subject is from the real world or from the world of the imagination. It can take place in the initial stages of a drawing and can serve as a means of early thinking about and a record of it in its process.

Clark made themselves up for the nature of the drawing. It is a type that exists in that part of us that has immediate responses that are, complex and responsive to a wide world.

The basic approach of getting information and organization for drawing takes the artist to work in an existing situation. They are people aware of seeing objects and relations and having them in space. They rely on light, the whole, before going to the parts. These approaches focus a drawing for a more sustained drawing and provide a comprehensive view early in the drawing.

Continuous drawing on the other hand, offers a more to a line, more, repetition of the parts. It allows one seeing and looking to be more detailed understanding of how the particular is to be made.

These approaches beginning approaches involve ways of thinking, how dimensional forms into a two-dimensional surface. Through these techniques we

Contemporary Approaches to Neuropsychological Assessment Gerald Goldstein, Theresa M. Incagnoli, 2013-06-29 This volume reflects in part an update of Clinical Application of Neuropsychological Test Batteries edited by Theresa Incagnoli Gerald Goldstein and Charles Golden some 10 years ago While the initial concept of the present editors involved doing a straightforward update of each chapter it soon became apparent that the field of clinical neuropsychology had changed so dramatically and rapidly that substantial changes in the outline had to be made It was our view that sufficient interest remained in the standard comprehensive neuropsychological test batteries to make an update worthwhile We asked four senior people to take on this assignment James Moses Jr and Arnold Purisch in the case of the Luria Nebraska Battery and James Reed and Homer Reed for the Halstead Reitan Battery These individuals all have long term associations with these procedures and can be viewed as pioneers in their development However it also seemed to us that there was an increasing interest in the psychometric aspects of the standard procedures and in assessment issues related to the relative merits of using standard or individualized assessment strategies Thus we have chapters by Elbert Russell and Gerald Goldstein that provide discussions of these current methodological and clinical issues During the past 10 years the cognitive revolution has made a strong impact on neuropsychology The interest of cognitive psychologists in brain function has increased dramatically and we now have an active field of cognitive neuropsychology something that was only beginning 10 years ago
