Cutting-Edge Solutions in Theoretical Physics: String Theory, Quantum Gravity, and Cosmology Cheok, Adrian David,Nardelli, Michele,Zhang, Hao,2025-10-24 Continued exploration of theoretical physics presents new questions about the nature of space time and matter At the center lies an evolving integration with advanced mathematics These fields demand new insights and often inspire the development of new mathematical frameworks From the symmetries of string theory to the structures of quantum spacetime and the geometry of cosmology mathematical innovation is essential for navigating the complexities of modern physics Further examination of this convergence of disciplines may reveal cutting edge solutions that redefine our understanding of the universe Mathematical Insights for Cutting Edge Solutions in Theoretical Physics String Theory Quantum Gravity and Cosmology explores modern theoretical physics particularly string theory quantum gravity and cosmology It offers a fresh perspective on how number theory and modular functions could provide new innovative developments in emerging fields This book covers topics such as quantum field theory geometry and arithmetic and is a useful resource for engineers mathematicians academicians researchers and scientists **Positive**

Solutions to Indefinite Problems Guglielmo Feltrin,2018-11-23 This book is devoted to the study of positive solutions to indefinite problems The monograph intelligibly provides an extensive overview of topological methods and introduces new ideas and results Sticking to the one dimensional setting the author shows that compelling and substantial research can be obtained and presented in a penetrable way In particular the book focuses on second order nonlinear differential equations It analyzes the Dirichlet Neumann and periodic boundary value problems associated with the equation and provides existence nonexistence and multiplicity results for positive solutions The author proposes a new approach based on topological degree theory that allows him to answer some open questions and solve a conjecture about the dependence of the number of positive solutions on the nodal behaviour of the nonlinear term of the equation The new technique developed in the book gives as a byproduct infinitely many subharmonic solutions and globally defined positive solutions with chaotic behaviour Furthermore some future directions for research open questions and interesting unexplored topics of investigation are proposed **CRC**
