Discovering Dynamical Systems Through

Experiment and Inquiry Thomas LoFaro, Jeff Ford, 2021-03-22 Discovering Dynamical Systems Through Experiment and Inquiry differs from most texts on dynamical systems by blending the use of computer simulations with inquiry based learning IBL IBL is an excellent tool to move students from merely remembering the material to deeper understanding and analysis This method relies on asking students questions first rather than presenting the material in a lecture Another unique feature of this book is the use of computer simulations Students can discover examples and counterexamples through manipulations built into the software These tools have long been used in the study of dynamical systems to visualize chaotic behavior We refer to this unique approach to teaching mathematics as ECAP Explore Conjecture Apply and Prove ECAP was developed to mimic the actual practice of mathematics in an effort to provide students with a more holistic mathematical experience In general each section begins with exercises guiding students through explorations of the featured concept and concludes with exercises that help the students formally prove the results While symbolic dynamics is a standard topic in an undergraduate dynamics text we have tried to emphasize it in a way that is more detailed and inclusive than is typically the case Finally we have chosen to include multiple sections on important ideas from analysis and topology independent from their application to dynamics
