Pedigree Worksheet

Answer Key

Interpreting a Human Pedigree

Use the pedigree below to answer 1-5

1. In a pedigree, a square represents a male. If it is darkened he has hemophilia; if clear, he has normal blood clotting.

a. How many males are there? 8

b. How many males have hemophilia? 3

2. A circle represents a female. If it is darkened, she has hemophilia; if open she is normal.

a. How many female are there? 8

b. How many females have hemophilia? 2

3. A marriage is indicated by a horizontal line connecting a circle to a square.

a. How many marriages are there? 3

4. A line perpendicular to a marriage line indicates the offspring. If the line ends with either a circle or a square, the couple had only one child. However, if the line is connected to another horizontal line, then several children were produced, each indicated by a short vertical line connected to the horizontal line. The first child born appears to the left and the last born to the right.

Abstract This thesis reports on a learning study that employed variation theory to enhance a domain specific generic capability pedigree analysis of Hong Kong secondary five students so as to help them develop their capability to solve pedigree problems Pedigree analysis is a study of inheritance in genetics which includes the deduction of dominant and recessive characters The literature and local examination reports suggested that solving pedigree problems is difficult for students as the process of deduction demands conceptual understanding and use of scientific language Three biology teachers participated in this learning study using variation theory Teachers shifted the focus of lesson observation from teaching performance to student learning to how students deduced the dominant character from pedigree problems which was the object of learning To explore the effectiveness of such teaching and learning to solve pedigree problems through different patterns of variation two cycles of learning study were conducted in two senior biology classes Results showed that students were more able to deduce the dominant character with relevant genetic principles by experiencing the variations Both conceptual understanding and scientific language are critical aspects of solving pedigree problems This study also suggests that explanatory scientific writing needs to be broken down into different components and then differentiated patterns of variation designed to let students discern those components and their relationships in that way their writing can

be scaffolded in a stepwise manner rather than giving them the whole writing framework at once However the identification of critical features and patterns of variation and their relevance to the object of learning should be considered carefully and explored further DOI 10 5353 th_b5387974 Subjects Study and teaching Secondary Genetics China Hong Kong
