Thalassemia Syndromes Marwa Zakaria, Tamer Hassan, Laila Sherief, Osaro Erhabor, 2023-11-22 The thalassemia syndromes are a diverse group of hereditary anemias caused by decreased or absent production of one type of globin chain. Genetic counseling, prenatal diagnosis, and newborn screening are all issues of importance in these inherited disorders. This book provides a comprehensive overview of thalassemia, including information on its mechanisms and treatment modalities. Chapters elucidate the mechanism of disordered synthesis of hemoglobin in thalassemia and present recent studies of the genetic mechanisms that underlie this abnormal biosynthetic process.

Anthropologies of Global Maternal and Reproductive Health Lauren J. Wallace, Margaret E. MacDonald, Katerini T. Storeng, 2022-01-11 This open access edited book brings together new research on the mechanisms by which maternal and reproductive health policies are formed and implemented in diverse locales around the world, from global policy spaces to sites of practice. The authors, both internationally respected anthropologists and new voices, demonstrate the value of ethnography and the utility of reproduction as a lens through which to generate rich insights into professionals and lay people's intimate encounters with policy. Authors look closely at core policy debates in the history of global maternal health across six different continents, including Women's use of misoprostol for abortion in Burkina Faso, The place of traditional birth attendants in global maternal health, Donor-driven maternal health programs in Tanzania, Efforts to integrate qualitative evidence in WHO maternal and child health policy making. *Anthropologies of Global Maternal and Reproductive Health* will engage readers interested in critical conversations about global health policy today. The broad range of foci makes it a valuable resource for teaching in medical anthropology, anthropology of reproduction, and interdisciplinary global health programs. The book will also find readership amongst critical public health scholars, health policy and systems researchers, and global public health practitioners.

Current Topics in Zoonoses Alfonso J. Rodriguez-Morales, 2024-06-26 Zoonoses, diseases transmitted from animals to humans, hold immense global significance, impacting public health, economies, and ecosystems. Adopting the One Health approach, which recognizes the interconnectedness of human, animal, and environmental health, is crucial in tackling these challenges. Zoonotic diseases pose significant public health threats. Diseases like rabies, Ebola, and influenza have claimed countless lives worldwide. Without proper management, these diseases can rapidly escalate into pandemics, as seen with the COVID-19 pandemic originating from a zoonotic transmission. The health of humans and animals are intricately linked, making collaborative efforts essential for disease prevention and control. Zoonoses have profound economic implications. Outbreaks can devastate agricultural sectors, leading to loss of livestock, reduced productivity, and trade restrictions. For instance, the 2001 foot and mouth disease outbreak in the United Kingdom resulted in billions of dollars in economic losses. Addressing zoonoses through a One Health approach can safeguard livelihoods and ensure food security. Furthermore, zoonotic diseases impact biodiversity and ecosystems. Diseases like West Nile virus and Lyme disease can affect

wildlife populations disrupting ecosystems and biodiversity Additionally habitat destruction and wildlife trafficking increase the likelihood of zoonotic spillover events We can mitigate these risks and preserve ecosystem integrity through conservation efforts and sustainable land use practices The global importance of zoonoses cannot be overstated By embracing the One Health approach we can address these complex challenges comprehensively Collaboration between human and veterinary medicine environmental science and other disciplines is essential for effective disease surveillance prevention and control By prioritizing the health of people animals and the environment we can build a safer healthier future for all
