Mambretti,D. Proverbs,2022-09-05 Research works were presented at the 8th International Conference on Flood and Urban Water Management with the aim of developing innovative solutions that can help bring about multiple benefits toward achieving integrated flood risk and urban water management strategies and policy The papers resulting from these works form this book Flooding is a global phenomenon that claims numerous lives worldwide each year When flooding occurs in urban areas it can cause substantial damage to

property as well as threatening human life In addition many more people must endure the homelessness upset and disruption that are left in the wake of floods The increased frequency of flooding in the last few years coupled with climate change predictions and urban development suggest that these impacts are set to worsen in the future How we respond and importantly adapt to these challenges is key to developing our long term resilience at the property community and city scale As our cities continue to expand their urban infrastructures need to be re evaluated and adapted to new requirements related to the increase in population and the growing areas under urbanization We also need to consider more nature based interventions to the management of flood risk including the adoption of more catchment based approaches These are now being recognised as being more sustainable and also able to achieve wider benefits to the environment and society as a whole Water supply systems and urban drainage are also increasingly important due to this expansion Topics such as contamination and pollution discharges in urban water bodies as well as the monitoring of water recycling systems are currently receiving a great deal of attention from researchers and professional engineers working in the water industry Mitigating losses from water distribution networks and effective efficient and energy saving management are key goals for optimising performance and reducing negative impacts Sewer systems are under constant pressure due to growing urbanization and climate change and the environmental impact caused by urban drainage overflows is related to both water quantity and water quality This book is aimed at researchers academics and practitioners involved in research and development activities across a wide range of technical and management topics related to urban water and flooding and its impacts on communities property and people
