History of Terrestrial Mammals in South America Thomas DeFler, 2018-12-19 This book takes a non technical approach in covering the evolution of South American mammalian fauna throughout geological history and discusses how South America has changed due to mammalian invasions Unlike other works on the subject this book attempts to answer several crucial questions that often go unmentioned together in one cohesive monograph What was the fauna like before the American interchange What were the origins of the now extinct groups when northern species arrived and out competed them How did the modern mammalian fauna come into

being with such disparate animal groups This information is given from a historical perspective throughout the book s 15 chapters and is presented in an easily graspable fashion by mostly avoiding technical language The book is written for academics scientists and scholars engaged in paleontology zoology and evolutionary biology but may also appeal to a larger audience of general readers interested in mammalian evolution The book begins with an introduction describing the tools necessary to interpret the evolutionary history of South American mammals in geological terms and some of the early people who helped found South American mammalian paleontology Chapter 2 describes the Mesozoic first mammals of Gondwana and what we are learning about them dominant before the K T extinction event Then chapters 3 through 8 cover the Cenozoic or Age of Mammals highlighting the major mammalian groups of South America that replaced the earlier mammals of Gondwana These groups include the marsupials native ungulates the xenarthrans armadillos anteaters sloths the caviomorphs rodents and the platyrrhine monkeys Chapters 9 and 10 address the Antarctic La Meseta fossils and the Colombian La Venta fossil faunal assemblages Chapter 11 discusses the neotropical mammals that invaded the Caribbean Islands and illustrates the influence South America has had on adjacent faunas Chapter 12 describes the origin of the Amazon River and the role it has played in the evolution of the mammals and other flora and fauna Chapter 13 tells the story of the Great American Biotic Interchange GABI and chapter 14 follows this up with a discussion of the Pleistocene mammal communities and their eventual extinction Chapter 15 concludes the text by discussing the modern mammals of South America and how despite the extensive Pleistocene extinctions there is still a lot of mammalian diversity in South America

Taxonomic Tapestries Alison M Behie, Marc F Oxenham, 2015-05-26 This volume explores the complexity diversity and interwoven nature of taxonomic pursuits within the context of explorations of humans and related species It also pays tribute to Professor Colin Groves whose work has had an enormous impact on this field Recent research into that somewhat unique species we call humankind through the theoretical and conceptual approaches afforded by the discipline of biological anthropology is showcased The focus is on the evolution of the human species the behaviour of primates and other species and how humans affect the distribution and abundance of other species through anthropogenic impact Weaving together these three key themes through the considerable influence of Colin Groves provides glimpses of how changes in taxonomic theory and methodology including our fluctuating understanding of speciation have recrafted the way in which we view animal behaviour human evolution and conservation studies
