Handbook of Research on Machine Learning Applications and Trends: Algorithms, Methods, and Techniques Olivas, Emilio Soria,Guerrero, José David Martín,Martinez-Sober, Marcelino,Magdalena-Benedito, Jose Rafael,Serrano López, Antonio José,2009-08-31 This book investigates machine learning ML one of the most fruitful fields of current research both in the proposal of new techniques and theoretic algorithms and in their application to real life problems Provided by publisher

Health Informatics: A Computational Perspective in Healthcare Ripon Patgiri,Anupam Biswas,Pinki Roy,2021-01-30 This book presents innovative research works to demonstrate the potential and the advancements of computing approaches to utilize healthcare centric and medical datasets in solving complex healthcare problems Computing technique is one of the key technologies that are being currently used to perform medical diagnostics in the healthcare domain thanks to the abundance of medical data being generated and collected Nowadays medical data is available in many different forms like MRI images CT scan images EHR data test reports histopathological data and doctor patient conversation data This opens up huge opportunities for the application of computing techniques to derive data driven models that can be of very high utility in terms of providing effective treatment to patients Moreover machine learning algorithms can uncover hidden patterns and relationships present in medical datasets which are too complex to uncover if a data driven approach is not taken With the help of computing systems today it is possible for researchers to predict an accurate medical diagnosis for new patients using models built from previous patient data Apart from automatic diagnostic tasks computing techniques have also been applied in the process of drug discovery by which a lot of time and money can be saved Utilization of genomic data using various computing techniques is another emerging area which may in fact be the key to fulfilling the dream of personalized medications Medical prognostics is another area in which machine learning has shown great promise recently where automatic prognostic models are being built that can predict the progress of the disease as well as can suggest the potential treatment paths to get ahead of the disease progression

Inductive Logic Programming Nikos Katzouris,Alexander Artikis,2022-02-23 This book constitutes the refereed conference proceedings of the 30th International Conference on Inductive Logic Programming ILP 2021 held in October 2021 Due to COVID 19 pandemic the conference was held virtually The 16 papers and 3 short papers presented were carefully reviewed and selected from 19 submissions Inductive Logic Programming ILP is a subfield of machine learning which originally relied on logic programming as a uniform representation language for expressing examples background knowledge and hypotheses Due to its strong representation formalism based on first order logic ILP provides an excellent means for multi relational learning and data mining and more generally for learning from structured data
