Handbook On Oleoresin And Pine Chemicals Rosin Terpene Derivatives Tall Oil Resin Am:

Handbook on Oleoresin and Pine Chemicals (Rosin, Terpene Derivatives, Tall Oil, Resin & Dimer Acids) H.

Panda, 2008-10-01 Pines are known to mankind from the time immemorial. It offers both direct uses as well as indirect uses specially soil conservation. Initially it was used mainly for fuel; their branches were used for festivals etc. Pines besides being a source of valuable timber, pulpwood, yield pitch, tar, rosin, colophony and turpentine collectively known as naval stores, a term coined to these owing to their use for construction and maintenance of sailing vessels as sealing compounds for their wooden hulls. The genus pine species tapped for their oleoresin in different countries. A variety of oleoresins are extracted from various plants. Pine oleoresin being the most important one is extracted from pine trees. Turpentine and rosin are two constituent parts of the pine oleoresins. The composition of turpentine varies considerably according to the species of pine exploited. More and more specialised uses are being found for pine resin products particularly those of high quality. Turpentine derived from pine resin is also used as a source of aroma chemicals in flavour and fragrance industry. Pinewood chemicals are effectively gained from the trees in three principal ways: treatment of exuded gum from living pines, processing the wood stumps and wastes of aged trees and treatment of black liquor obtained as a byproduct in wood pulp industry. There are two steps involved in production of oleoresin: olustee gum cleaning process and recovery of turpentine and rosin batch and continuous process. The panorama of base catalysed isomerisations of terpenes is an important part of aroma chemistry. Major contributions in this area are presented here under sections on hydrocarbons, alcohols, aldehydes, ketones, acids, esters and epoxides. Tall oil is a byproduct of the pine wood use to make sulfate pulp. Tall oil products find use in many product applications because of their economy and ready availability. The principal industrial applications of tall oil products are numerous: adhesives, carbon paper, detergents, driers, drilling fluids, oils, gloss oils, paper size, plasticizers, printing inks, soaps, textile oils etc. Some of the fundamentals are: pine oleoresin extraction methods, occurrence, formation and exudation of oleoresin in pines, processing of oleoresin, rosin derivatives and its potential new developments in rosin ester and dimer chemistry, terpene based adhesives, effect of solvent, ozone concentration and temperature on yields were investigated, sylvestrene and some of its derivatives, homopolymers and copolymers of acrylates, polymers and copolymers of vinyl pinolate, base catalysed isomerisations of terpenes, components of pine roots, insecticides based on turpentine, the general characteristics of dimer acids, structure and properties of dimer acids etc. The present book has been published having in view the important uses of pines. The book contains manufacturing process of different products extracted from pines like oleoresin, rosin, turpentine derivatives, tall oil resins and dimer acids etc. This is the first book of its kind which is very resourceful for all from researchers to professionals. Rosin-based Chemicals and Polymers Jinwen Zhang, 2012-04-03 Rosin is an abundantly available natural product composed of around 90% acidic and 10% neutral compounds Rosin and its derivatives have long been used as tackifiers in adhesives They have also found other niche applications in inks varnishes paints sealing wax some soaps paper sizing soldering plasters food additives etc However many of the conventional applications of rosin mainly utilize the inherent physical properties in various practices In recent years there has been a growing interest in using rosin acid derivatives as building blocks in the synthesis of polyesters polyurethanes epoxies and curing agents In addition rosin acid derived chemicals are also used as nucleating agents surfactants drugs and other special applications This book brings together a collection of scientific articles on recent research and development of utilizing natural chemicals from pine resin as feedstock for polymers and new industrial chemicals It focuses mainly on the new use of rosin acids but also covers the applications of other chemicals from tree sap such as terpenes This book will provide considerable material for researchers in both academia and industry with the latest developments in the utilization of rosin and terpenes
