

Hayashi *Econometrics*: Answers to Selected Review Questions

Chapter 1

Section 1.1

1. The intercept is increased by $\log(100)$.
2. Since $(\varepsilon_i, \mathbf{x}_i)$ is independent of $(\varepsilon_j, \mathbf{x}_1, \dots, \mathbf{x}_{i-1}, \mathbf{x}_{i+1}, \dots, \mathbf{x}_n)$ for $i \neq j$, we have: $E(\varepsilon_i | \mathbf{x}_i, \varepsilon_j) = E(\varepsilon_i | \mathbf{x}_i)$. So

$$\begin{aligned} E(\varepsilon_i \varepsilon_j | \mathbf{X}) &= E[E(\varepsilon_j \varepsilon_i | \mathbf{X}, \varepsilon_j) | \mathbf{X}] && \text{(by Law of Iterated Expectations)} \\ &= E[\varepsilon_j E(\varepsilon_i | \mathbf{X}, \varepsilon_j) | \mathbf{X}] && \text{(by linearity of conditional expectations)} \\ &= E[\varepsilon_j E(\varepsilon_i | \mathbf{x}_i) | \mathbf{X}] \\ &= E(\varepsilon_i | \mathbf{x}_i) E(\varepsilon_j | \mathbf{x}_j). \end{aligned}$$

The last equality follows from the linearity of conditional expectations because $E(\varepsilon_i | \mathbf{x}_i)$ is a function of $\mathbf{x}_i$.

3.

$$\begin{aligned} E(y_i | \mathbf{X}) &= E(\mathbf{x}'_i \boldsymbol{\beta} + \varepsilon_i | \mathbf{X}) && \text{(by Assumption 1.1)} \\ &= \mathbf{x}'_i \boldsymbol{\beta} + E(\varepsilon_i | \mathbf{X}) && \text{(since } \mathbf{x}_i \text{ is included in } \mathbf{X}) \\ &= \mathbf{x}'_i \boldsymbol{\beta} && \text{(by Assumption 1.2).} \end{aligned}$$

Conversely, suppose $E(y_i | \mathbf{X}) = \mathbf{x}'_i \boldsymbol{\beta}$ ($i = 1, 2, \dots, n$). Define $\varepsilon_i = y_i - E(y_i | \mathbf{X})$. Then by construction Assumption 1.1 is satisfied: $\varepsilon_i = y_i - \mathbf{x}'_i \boldsymbol{\beta}$. Assumption 1.2 is satisfied because

$$\begin{aligned} E(\varepsilon_i | \mathbf{X}) &= E(y_i | \mathbf{X}) - E[E(y_i | \mathbf{X}) | \mathbf{X}] && \text{(by definition of } \varepsilon_i \text{ here)} \\ &= 0 && \text{(since } E[E(y_i | \mathbf{X}) | \mathbf{X}] = E(y_i | \mathbf{X})). \end{aligned}$$

4. Because of the result in the previous review question, what needs to be verified is Assumption 1.4 and that $E(CON_i | YD_1, \dots, YD_n) = \beta_1 + \beta_2 YD_i$. That the latter holds is clear from the i.i.d. assumption and the hint. From the discussion in the text on random samples, Assumption 1.4 is equivalent to the condition that $E(\varepsilon_i^2 | YD_i)$ is a constant, where $\varepsilon_i = CON_i - \beta_1 - \beta_2 YD_i$.

$$\begin{aligned} E(\varepsilon_i^2 | YD_i) &= \text{Var}(\varepsilon_i | YD_i) && \text{(since } E(\varepsilon_i | YD_i) = 0) \\ &= \text{Var}(CON_i | YD_i). \end{aligned}$$

This is a constant since (CON_i, YD_i) is jointly normal.

5. If $x_{i2} = x_{j2}$ for all i, j , then the rank of $\mathbf{X}$ would be one.

theory of mathematical finance and the practical applications of these concepts for derivative pricing and portfolio management The book provides students with a very hands on rigorous introduction to foundational topics in quant finance such as options pricing portfolio optimization and machine learning Simultaneously the reader benefits from a strong emphasis on the practical applications of these concepts for institutional investors Features Useful as both a teaching resource and as a practical tool for professional investors Ideal textbook for first year graduate students in quantitative finance programs such as those in master s programs in Mathematical Finance Quant Finance or Financial Engineering Includes a perspective on the future of quant finance techniques and in particular covers some introductory concepts of Machine Learning Free to access repository with Python codes available at www.routledge.com/9781032014432 and on https://github.com/lingyixu/Quant_Finance_With_Python_Code

Mathematical Reviews, 2002 Small Sample Size Solutions Rens van de Schoot, Milica Miočević, 2020-02-13 Researchers often have difficulties collecting enough data to test their hypotheses either because target groups are small or hard to access or because data collection entails prohibitive costs Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research Each chapter illustrates statistical methods that allow researchers to apply the optimal statistical model for their research question when the sample is too small This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations and solutions include both classical and Bayesian methods All proposed solutions are described in steps researchers can implement with their own data and are accompanied with annotated syntax in R The methods described in this book will be useful for researchers across the social and behavioral sciences ranging from medical sciences and epidemiology to psychology marketing and economics Econometrics Fumio Hayashi, 2000-11-19 Hayashi s Econometrics promises to be the next great synthesis of modern econometrics It introduces first year Ph D students to standard graduate econometrics material from a modern perspective It covers all the standard material necessary for understanding the principal techniques of econometrics from ordinary least squares through cointegration The book is also distinctive in developing both time series and cross section analysis fully giving the reader a unified framework for understanding and integrating results Econometrics has many useful features and covers all the important topics in econometrics in a succinct manner All the estimation techniques that could possibly be taught in a first year graduate course except maximum likelihood are treated as special cases of GMM generalized methods of moments Maximum likelihood estimators for a variety of models such as probit and tobit are collected in a separate chapter This arrangement enables students to learn various estimation techniques in an efficient manner Eight of the ten chapters include a serious empirical

application drawn from labor economics industrial organization domestic and international finance and macroeconomics These empirical exercises at the end of each chapter provide students a hands on experience applying the techniques covered in the chapter The exposition is rigorous yet accessible to students who have a working knowledge of very basic linear algebra and probability theory All the results are stated as propositions so that students can see the points of the discussion and also the conditions under which those results hold Most propositions are proved in the text For those who intend to write a thesis on applied topics the empirical applications of the book are a good way to learn how to conduct empirical research For the theoretically inclined the no compromise treatment of the basic techniques is a good preparation for more advanced theory courses
