Fairfax Media Australia State and Revolution in Finland Risto Alapuro, 2018-11-05. By analysing the experience of Finland, Risto Alapuro shows how upheavals in powerful countries shape the internal politics of smaller countries. This linkage, a highly topical subject in the twenty-first century world, is concretely studied by putting the abortive Finnish revolution of 1917-18 into a long historical and a broad comparative perspective.

Writing the City Peter Preston, Paul Simpson-Housley, 2002-09-11. The expression of human experience it embodies includes all personal history. Saul Bellow's view of the city is far from that of classic geographical descriptions which look at growth or decline, demographic patterns, traffic flows and economic potential. These empirically conceived models of urban geography fail to accommodate the crucial human aspect of city life. Located at the interface of geography and literature, *Writing the City* visualizes the city through the hopes, aspirations, disappointments and pains of international novelists and creative writers. From Manchester, Montreal and Sydney to Osaka, Varanasi and Odessa, cities become more than their built environment; more than a set of class or economic relationships, they are also an experience to be lived, suffered and undergone. Thus cities are seen in terms of the innocence of an Eden now lost, a threat of sinful Babylon and the promise of a New Jerusalem.

Mapping It Out Mark Monmonier, 2024-05-31. Writers know only too well how long it can take and how awkward it can be to describe spatial relationships with words alone. And while a map might not always be worth a thousand words, a good one can help writers communicate an argument or explanation clearly, succinctly and effectively. In his acclaimed *How to Lie with Maps*, Mark Monmonier showed how maps can distort facts. In *Mapping it Out: Expository Cartography for the Humanities and Social Sciences*, he shows authors and scholars how they can use expository cartography, the visual two-dimensional organization of information, to heighten the impact of their books and articles. This concise practical book is an introduction to the fundamental principles of graphic logic and design, from the basics of scale to the complex mapping of movement or change. Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas, from literary criticism to sociology. He demonstrates, for example, various techniques for representing changes and patterns, different typefaces and how they can either clarify or confuse information, and the effectiveness of less traditional map forms such as visibility base maps, frame rectangle symbols and complementary scatterplot designs for conveying complex spatial relationships. There is also a wealth of practical information on map compilation, cartobibliographies, copyright and permissions, facsimile reproduction and the evaluation of source

materials Appendixes discuss the benefits and limitations of electronic graphics and pen and ink drafting and how to work with a cartographic illustrator Clearly written and filled with real world examples Mapping it Out demystifies mapmaking for anyone writing in the humanities and social sciences A useful guide to a subject most people probably take too much for granted It shows how map makers translate abstract data into eye catching cartograms as they are called It combats cartographic illiteracy It fights cartophobia It may even teach you to find your way Christopher Lehmann Haupt The New York Times

Spatial Intelligence Daniel Ness, Stephen J. Farenga, Salvatore G. Garofalo, 2017-05-12 Spatial Intelligence examines public and professional conceptions of the relationships between thinking about spatial attributes and active engagement in spatially related constructions and designs Even though children's and adolescents' spatial propensities in constructive activities parallel the skills needed by professionals in both established and emerging fields spatial education is often missing from K-12 curricula and is easily impeded by teachers parents or other individuals who do not provide contexts in formalized settings such as schools to nurture its potential This book bridges the gap by linking the natural spatial inclinations interests and proclivities of individuals from a variety of cultures with professional training and expertise in engineering architecture science and mathematics Educators will be better able to achieve the skills and awareness necessary to provide children and young adults with the vital opportunities inherent in spatial education
