RF Circuit Design Techniques for MF-UHF Applications

Abdullah Eroglu, 2017-12-19 Magnetic resonance imaging semiconductor processing and RFID are some of the critical applications

within the medium frequency MF to ultrahigh frequency UHF range that require RF designers to have a solid understanding of analytical and experimental RF techniques. Designers need to be able to design components and devices cost effectively and integrate them with high efficiency, minimal loss and required power. Computer aided design CAD tools also play an important part in helping to reduce costs and improve accuracy through optimization. RF Circuit Design Techniques for MF UHF Applications explains how to design, simulate and implement RF microwave components and devices for applications within the medium frequency MF to ultrahigh frequency UHF range. The book makes RF design simple by expertly blending theory, simulation and practical application examples. A Practical Guide to RF Circuit Design in the MF UHF Range: Theory, Simulation and Real World Application Examples. After a review of network parameters used in the analysis of RF components and devices, the book examines MF UHF design techniques in detail. These include techniques for designing high power microstrip circuits, directional couplers, transformers, composite and multilayer inductors, filters, combiners, dividers and RFID systems. For every device, the book gives the required theory and then explains the verification process with CAD tools. In addition, each design is illustrated with real life implementation examples that use a variety of CAD tools such as MATLAB, Mathcad, HFSS, TMS, Ansoft Designer, Sonnet and PSpice. Design tables, curves and charts are included to demonstrate an efficient design process. Throughout the book, also offers practical hints to help engineers shorten the design time. Design MF UHF Devices More Cost Effectively. The book reflects the optimum design methodology used in RF engineering from the application of theory to simulation for verification to experimentation. Packed with useful techniques, tips and examples, it is an invaluable resource for engineers, researchers and students working in the MF UHF range. *Official Gazette of the United States Patent Office*, United States Patent Office, 1969. **Wireless World**, 1927. **Radio Engineer's Handbook**, Frederick Emmons Terman, 1943. **Official Gazette of the United States Patent and Trademark Office**, 1996.
