Highway Engineering Solved Problems:

Methodology of Highway Engineering Structural Design and Construction Hanhua Zhu, Lei Shi, 2020-09-17 This book mainly studies the methodologies of structural design and construction for highway engineering which are applicable to the overall control and the precise operation of engineering structures. It explores the method of comprehensive analysis, the simplification of complex problems, and the application of typical engineering tools. In turn, the book presents a number of innovative approaches, e.g., the coordinated control of structural deformation method, the theory of underground engineering balance and stability, and the soft soil foundation treatment of bumping at the bridgehead. These methodologies are then illustrated in typical cases and representative problems explained from a practical standpoint. Examples in special settings are also discussed, e.g., highway construction in Tibet and rebuilding after the Wenchuan earthquake. The book offers a valuable reference guide for all those whose work involves highway engineering design, construction management, and scientific research.

Solved Practical Problems in Transportation Engineering Ghazi G. Al-Khateeb, 2022-09-23 The book presents engineering concepts, techniques, practices, principles, standard procedures, and models that are applied and used to design and evaluate traffic systems, road pavement structures, alternatives of transportation systems, roadway horizontal and vertical alignments to ultimately achieve safety, sustainability, efficiency, and cost effectiveness. The book provides a plentiful number of problems on five major areas of transportation engineering and includes a broad range of ideas and practical problems that are included in all topics of the book. Furthermore, the book covers problems dealing with theory, concepts, practice, and applications. The solution of each problem in the book follows a step-by-step procedure that includes the theory and the derivation of the formulas in some cases and the computations. Moreover, almost all problems in the five parts of the book include detailed calculations that are solved using the MS Excel worksheets, where mathematical, trigonometric, statistical, and logical formulas are used to obtain a more rapid and efficient solution. In some cases, the MS Excel solver tool is used for solving complex equations in several problems of the book. Additionally, numerical methods, linear algebraic methods, and least squares regression techniques are utilized in some problems to assist in solving the problem and make the solution much easier. The book will help academics and professionals to find practical solutions across the spectrum of transportation engineering. The book is designed to be informative and filled with an abundance of solutions to problems in the engineering science of transportation. It is expected that the book will enrich the knowledge and science in transportation engineering, thereby elevating the civil engineering profession in general and the transportation engineering practice in particular, as well as advancing the transportation engineering field to the best levels possible.
