The

ventricular-subventricular zone: a source of oligodendrocytes in the adult brain Oscar Gonzalez-Perez, Jose Manuel Garcia-Verdugo, Adan Aguirre, 2014-09-30 Demyelinating diseases are characterized by an extensive loss of oligodendrocytes and myelin sheaths from axolemma which commonly result in disability in young adults To date there is no effective treatment against these neurological disorders In the adult brain there are neural stem cells NSCs that reside within a niche denominated ventricular subventricular zone V SVZ in the lateral wall of the cerebral ventricles NSCs give rise to neurons and oligodendrocytes that help preserve cellular homeostasis Growing evidence indicates that V SVZ progenitor cells may represent an endogenous source of oligodendrocytes that can be useful to treat demyelinating diseases This e Book The ventricular subventricular zone as a source of oligodendrocytes in the adult brain collected the most recent evidence regarding the mechanisms that modulate the proliferation migration quiescence cell fate choices and survival of oligodendrocyte precursors generated in the V SVZ Herein we compiled information about the role of Sonic hedgehog NMDA receptors ErbB proteins hemopressin erythropoietin osmolarity and microglia in the oligodendrocyte production Some chapters also describe the role of oligodendrocyte precursors in the preservation of cellular homeostasis aging and white matter repair All these information is presented as novel research findings short communications and review articles which were written by experts in the field of oligodendrocyte generation myelin production and white matter re myelination

Novel insights in rehabilitation of neglect, 2nd Edition Stefan Van Der Stigchel, Tanja Nijboer, 2015-01-09 Hemispatial neglect is the failure to report respond to or orient to novel or meaningful stimuli presented in the contralesional visual field It constitutes one of the most invalidating neurological disorders that can occur after stroke It is therefore important to treat neglect as adequate as possible and much of the research dedicated to neglect therefore focuses on rehabilitation In this special topic you will find 29 articles on the rehabilitation of neglect This Research Topic has opened new perspectives and has given us an indication of where the field is going Although some of the current rehabilitation techniques have proven to be beneficial there is limited agreement on the most valuable technique or the mechanisms underlying the ameliorating effects

Growth Curve Analysis and Visualization Using R Daniel Mirman, 2016-04-19 Learn How to Use Growth Curve Analysis with Your Time Course Data An increasingly prominent statistical tool in the behavioral sciences multilevel regression offers a statistical framework for analyzing longitudinal or time course data It also provides a way to quantify and analyze individual differences such as developmental and neuropsychological in the context of a model of the overall group effects To harness the practical aspects of this useful tool behavioral science researchers need a concise accessible resource that explains how to implement these analysis methods Growth Curve Analysis and Visualization Using R provides a practical easy to understand guide to carrying out multilevel regression growth curve analysis GCA of time course or longitudinal data in the behavioral sciences particularly cognitive science cognitive neuroscience and psychology With a minimum of statistical theory and technical jargon the author focuses on the concrete issue of applying GCA to behavioral science data and

individual differences The book begins with discussing problems encountered when analyzing time course data how to visualize time course data using the ggplot2 package and how to format data for GCM and plotting It then presents a conceptual overview of GCM and the core analysis syntax using the lme4 package and demonstrates how to plot model fits The book describes how to deal with change over time that is not linear how to structure random effects how GCM and regression use categorical predictors and how to conduct multiple simultaneous comparisons among different levels of a factor It also compares the advantages and disadvantages of approaches to implementing logistic and quasi logistic GCM and discusses how to use GCM to analyze individual differences as both fixed and random effects The final chapter presents the code for all of the key examples along with samples demonstrating how to report GCM results Throughout the book R code illustrates how to implement the analyses and generate the graphs Each chapter ends with exercises to test your understanding The example datasets code for solutions to the exercises and supplemental code and examples are available on the author's website
