Ziemann, Jürgen Krauser, Peter E. Zamzow, Werner Daum, 2013-03-09 Optical information and data transmission has been an integral part of the economic life for many years The demand for ever increasing transmission rates a high horizon of expectations and the expansion of pan European networks led to a boom in glass fiber technologies Using the physical properties of glass fibers for transmitting high data rates while simultaneously bridging long distances is the main objective here As a result of this development the technical and economical allocation of the so called last mile and short distance in house transmission to the subscriber s desk inside a building has gained much significance Existing copper networks whose utilization ratio is constantly improved by technical upgrading are used here today POF or Polymer Optical Fiber now provides us with another interesting new and economical transmission element for this particular field of applications While the technology has already been developed in the seventies no economical system solutions existed until late in the nineties

But now that transmitter and receiver modules in the visible wave length range 400 800 nm are available at reasonable prices the situation is different The first technical and economical breakthrough was made in the automotive industry in 1998 with the D2B and with Most in the year 2000 respectively The first optical fiber systems are now successfully used in high comfort up market car models Providing fast and safe connections is one of NEXANS's main objectives

Formal Methods in Computer-Aided Design Warren A. Jr. Hunt, Steven D. Johnson, 2007-11-29 The biannual Formal Methods in Computer Aided Design conference FMCAD 2000 is the third in a series of conferences under that title devoted to the use of discrete mathematical methods for the analysis of computer hardware and software The work reported in this book describes the use of modeling languages and their associated automated analysis tools to specify and verify computing systems Functional verification has become one of the principal costs in a modern computer design effort In addition verification of circuit models timing power etc requires even more effort FMCAD provides a venue for academic and industrial researchers and practitioners to share their ideas and experiences of using discrete mathematical modeling and verification It is noted with interest by the conference chairmen how this area has grown from just a few people 15 years ago to a vibrant area of research development and deployment It is clear that these methods are helping reduce the cost of designing computing systems As an example of this potential cost reduction we have invited David Russino of Advanced Micro Devices Inc to describe his verification of floating point algorithms being used in AMD microprocessors The program includes 30 regular presentations selected from 63 submitted papers
