Disequilibrium, Growth and Labor Market Dynamics Carl Chiarella, Peter Flaschel, Gangolf Groh, Willi Semmler, 2013-06-29 In this book on disequilibrium growth and labor market dynamics we take predominantly a macroeconomic perspective We present a working model that can easily be varied in different directions in order to subsume innovations in the literature on macroeconomics old and new and to contribute to important currently discussed macroeconomic issues Our working model is set up in a way that there is a close relationship between our presented dynamic models and modern macro econometric models with disequilibrium both in the labor and the goods markets One of our objectives is therefore to narrow the gap between theoretical and applied structural macrodynamic model building We hope that the book will be a useful reference for all researchers academic teachers and practitioners of macroeconomic and macro econometric model building who are interested in economic dynamics independently of whether they use equilibrium or disequilibrium methods in their own research We base this hope on the fact that our approach contains a number of unique features The emphasis on the identification and analysis of the basic feedback mechanisms at work in modern macro economies A detailed study of the partial as well as integrated dynamic interaction between these

feedback mechanisms that constitute the interdependence of markets and sectors of the modern macro economy The relationship between the macroeconomic framework of our working model and the Walrasian Non Walrasian and New Keynesian reformulations of macroeconomics Europe and the Euro Enrico Marelli,Marcello Signorelli,2016-11-17 This book offers a fresh perspective on the recent Eurozone double crisis and its related economic policies The authors present empirical evidence which sheds new light on the growing economic and political debate on the future of the Euro the Eurozone and the EU The book investigates and assesses the impact of the crisis with particular reference to monetary and fiscal policy whose protracted austerity approach has dampened economic growth In their discussion of the long run European integration process the authors emphasize the original weaknesses in the construction of the European Monetary Union and examine its failure to respond to the recent crisis The concluding chapter focuses on the need for crucial reform in European governance and discusses the impact of the UK's recent EU membership referendum Scholars students and members of the general public with an interest in the future of the Eurozone will find this work thought provoking instructive and highly informative

The Econometrics of Macroeconomic Modelling Gunnar Bårdsen,Øyvind Eitrheim,Eilev Jansen,Ragnar Nymoen,2005-04-14 Macroeconometric models in many ways the flagships of the economist's profession in the 1960s came under increasing attack from both theoretical economist and practitioners in the late 1970s Critics referred to their lack of microeconomic theoretical foundations ad hoc models of expectations lack of identification neglect of dynamics and non stationarity and poor forecasting properties By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics Nevertheless unlike the dinosaurs to which they often have been likened macroeconometric models have never completely disappeared from the scene This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies **Youth Unemployment in Advanced Economies in Europe** Angana Banerji,Mr.Sergejs Saksonovs,Ms.Huidan Huidan Lin,Mr.Rodolphe Blavy,2014-12-05 The

SDN will assess the youth unemployment problem in advanced European countries with a special focus on the euro area It will document the main trends in youth and adult unemployment in 22 European countries before and after the global financial crisis It will identify the main drivers of youth and adult unemployment focusing in particular on the role of the business cycle and structural characteristics of the labor market It will outline the main elements of a comprehensive strategy to address the problem

Mobility in Europe Alexandre Janiak, Etienne Wasmer, 2008 Adjustments in the European labour markets are a major source of economic resilience and integration As such they warrant in depth understanding and close monitoring in the specific context of Eurozone and national fiscal policies This report begins with an executive summary part A then goes on to review recent literature on adjustment to asymmetric shocks within a monetary union part B and to highlight the role of real adjustment notably labour adjustment In part C we study the extent to which there has been an increase or a decrease in the convergence and speed of adjustment of regional and national labour markets of Member States after the EMU We find no evidence of a decline in either of those dimensions In part D we explore areas requiring policy intervention For that we build an original methodology we study how the dynamics of labour markets depend on various institutions The methodology is adapted to national labour markets and regional labour markets where in addition one can capture the effects on regional population and inter regional mobility We find a surprisingly strong role for the institutions in the housing market somewhat stronger than other institutions and check the robustness of this result We then argue in part E that removing obstacles to geographical mobility and simultaneously undertaking pro competition reforms in the goods market could be a beneficial mix as these measures each reinforce the other's positive effect Wage flexibility notably regional wage flexibility would also ease the convergence of labour markets But in a realistic short run this cannot be the only dimension of reform it requires social consensus on redefining fundamental elements of the European Welfare States which is a long run target We focus on other reforms that can be implemented in a shorter time horizon
