The Structure of Derivatives Exchanges George Tsetsekos, Panayotis N. Varangis, 1998 The Structure of Derivatives Exchanges George P. Tsetsekos, 2016 Derivatives exchanges can offer emerging market economies certain important benefits including risk transfer price discovery and more public information But they are not a substitute for reform of financial capital and commodity markets Tsetsekos and Varangis examine the architecture elements of market design and products traded in derivatives exchanges around the world The core function of a derivatives exchange is to facilitate the transfer of risk among economic agents by providing mechanisms to enhance liquidity and facilitate price discovery They test the proposition that organizational arrangements necessary to perform this function are not the same across markets They also examine the sequencing of products introduced in derivatives exchanges Using a survey instrument they find that Financial systems perform the same core functions across time and place but institutional arrangements differ The ownership structure of derivatives exchanges assumes different forms across markets The success of an exchange depends on the structure adopted and the products traded Exchanges are regulated directly or indirectly through a government law In addition exchanges have their own regulatory structure Typically but not always market making systems are based on open outcry with daily mark to market and gross margining but electronic systems are gaining popularity Several but not all exchanges own clearing facilities and use netting settlement procedures As for derivative products traded

they find that Although most of the older exchanges started with mainly agricultural commodity derivatives newer exchanges first introduce financial derivative products Derivatives based on a domestic stock index have greater potential for success followed by derivatives based on local interest rates and currencies The introduction of derivatives contracts appears to take more time in emerging markets compared with developed with the exception of index products This paper a product of the Development Research Group is part of research project Market Architecture and Design of Derivatives Exchanges RPO 680 45 Earlier versions of the paper were presented at the annual meetings of the Multinational Finance Society June 25 28 1997 and the Financial Management Association Honolulu October 15 18 1997 **Financial Derivatives** Rob Quail,James A.
