Kiefer, 2012-12-06 In almost all principled accounts of questions questions are related to the corresponding answers Zellig Harris Harris 1978 1 for example maintains that all interrogative sentences can be derived by means of the independently established transformations of the language from sentences which assert that someone is asking about a disjunction of statements which are the relevant possible answers to that interrogative This amounts to the claim that a yes no question such as Will John stay is derived from I ask you whether John will stay and a wh question such as Who came is derived from something like I ask you whether A came or B came or or X came Though in generative grammar interrogatives are not derived from the corresponding declaratives the semantic interpretation of questions is akin to the syntactic source of questions posited by Harris Jerrold J Katz and Paul M Postal Katz Postal 1964 113 117 state a reading rule for Q the interrogative constituent which boils down to 1 in the case of yes no questions and to 2 in the case of wh questions 1 Tell me which of the following is true John will stay or John will not stay 2 Tell me which of the following is true A came or B came or or X came Thus the semantic interpretation of questions makes reference to the set of possible answers represented here by a disjunction of statements **Questions on Logic** Henry Holman, 1915 Meaning in Culture F. Inquiry as Inquiry: A Logic of Scientific Discovery Jaakko Hintikka, 2013-04-17 Is a genuine logic of scientific discovery possible In the essays collected here Hintikka not only defends an affirmative answer he also outlines such a logic It is the logic of questions and answers Thus inquiry in the sense of knowledge seeking becomes inquiry in the sense of interrogation Using this new logic Hintikka establishes a result that will undoubtedly be considered the fundamental theorem of all epistemology viz the virtual identity of optimal strategies of pure discovery with optimal deductive strategies Questions to Nature of course must include observations and experiments Hintikka shows in fact how the logic of experimental inquiry can be understood from the interrogative vantage point Other important topics examined include induction in a forgotten sense that has nevertheless played a role in science explanation the incommensurability of theories theory ladenness of observations and identifiability

Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2012-12-06 The chapters in the present volume go beyond classical extensional logic with respect to one important factor they all include among the semantic constituents representations of so called possible worlds The inclusion of such indices has turned out to be the semantic mainstay in dealing with a number of issues having to do with intensional features of natural and artificial languages It is of course an open question whether possible world semantics is in the final analysis the proper solution to the many problems and puzzles intensional constructions raise for the logical analysis of the many varieties of discourse At present there seem to be about as many opponents as proponents with regard to the usefulness of having the semantics of intensional languages based on possible world constructs Some attempts to come to grips with intensional phenomena which are not couched in the possible world framework are discussed in Volume IV of the Handbook Chapter 1 is an extensive survey of the main systems of propositional modal logic including the most important

meta mathematical results and the techniques used in establishing these It introduces the basic terminology and semantic machinery applied in one way or another in many of the subsequent chapters Chapter 2 discusses the most significant developments in propositional tense logic which can of course be regarded as a special kind of modal logic where the possible world indices are simply ordered moments of time

Berchman, 2021-04-23 Aristotle and Plotinus set the horizon of inquiry thinking is thinking on thinking Discussion of mind meaning and subjectivity begins with the question How is thinking on thinking different from the kind of thinking with which we are familiar The answer is that thinking on thinking is about the presuppositions concepts and problems that generate questions in ancient and modern metaphysics epistemology aesthetics philosophy of mind and philosophy of language Topics examined include the nature of intentionality and meaning identity and relation mind and consciousness self identity and subjectivity which lead into discussions concerning other minds the limits of thought and language and the emergence of aesthetics of the self The effects of thinking on thinking are mapped particularly in parsing problems in ancient modern analytic and phenomenological thought with advocacy of its importance in the present age

The Logic of Epistemology and the Epistemology of Logic Jaakko Hintikka, Merrill B.P. Hintikka, 2012-12-06 Somewhat like Henkin's nonstandard interpretation of higher order logics while the right semantics or logical modalities is an analogue to the standard of type theory in Henkin's sense interpretation Another possibility would be to follow W V Quine's advice to give up logical modalities as being beyond repair Or we could also try to develop a logic of conceptual possibility restricting the range of our possible worlds to those compatible with the transcendental presuppositions of our own conceptual system This looks in fact like one of the most interesting possible theories I have dreamt of developing but undoubtedly never will Its kinship with Kant's way of thinking should be obvious Besides putting the entire enterprise of possible worlds semantics into a perspective we can also see that the actual history of possible worlds semantics is more complicated than it might first appear to be For the standard interpretation of modal logics has reared its beautiful head repeatedly in the writings of Stig Kanger Richard Montague the pre Montague semantics theorist and Nino Cocchiarella **Essays in Logical Philosophy** Andrzej Wisniewski, 2013 This collection of papers is written in the spirit of what is nowadays called Logical Philosophy The topics addressed include skepticism and the criterion of truth situational semantics computational aspects of possible worlds semantics and question answer systems occurrent beliefs the logical omniscience paradox paraconsistency and models of explanatory procedures Series Development in Humanities Vol 12 *Handbook of Logic in Artificial Intelligence and Logic Programming: Volume 5: Logic Programming* Dov M. Gabbay, C. J. Hogger, J. A. Robinson, 1998-01-08 The Handbook of Logic in Artificial Intelligence and Logic Programming is a multi volume work covering all major areas of the application of logic to artificial intelligence and logic programming The authors are chosen on an international basis and are leaders in the fields covered Volume 5 is the last in this well regarded series Logic is now widely recognized as one of the foundational disciplines of computing It has found applications in virtually all aspects of the subject from software and hardware engineering to programming languages and artificial intelligence In response to the growing need for an in depth survey of these applications the Handbook of Logic in Artificial Intelligence and its companion the Handbook of Logic in Computer Science

have been created The Handbooks are a combination of authoritative exposition comprehensive survey and fundamental research exploring the underlying themes in the various areas Some mathematical background is assumed and much of the material will be of interest to logicians and mathematicians Volume 5 focuses particularly on logic programming The chapters which in many cases are of monograph length and scope emphasize possible unifying themes Zur Theorie der Frage Dieter Krallmann,1981 *Knowledge and Inquiry* ,2023-03-27 ISBN 9042000694 paperback NLG 50 00 Main headings I Historical perspectives II Formal tools induction observation and identifiability III Questions in inquiry the interrogative model IV Growth of knowledge explanation and discovery V Jaakko Hintikka replies VI Abstracts skills in writing **Inferences with Ignorance: Logics of Questions** Michal Peliš,2017-03-01 Inferences with Ignorance focuses on two formal logic systems that employ the type of inferences in which questions are used in addition to statements Not merely capturing questions as part of a logical apparatus Michal Peli also emphasizes the role of question asking in communication The book presents options for formalizing questions using sets of direct answers demonstrates where questions are used in inferences and explores asking questions and seeking answers as important components of everyday communication proposing ways of using questions within a formal system that can capture a change in knowledge during this simple communication
