From choosing the right hardware to designing effective pipelines, architectures and adopting software development best practices, this guide will appeal to machine learning and data science specialists whilst also laying out key high-level principles in a way that is approachable for students of computer science and aspiring programmers.

A First Course in Machine Learning Simon Rogers, Mark Girolami, 2016-10-14. A First Course in Machine Learning by Simon Rogers and Mark Girolami is the best introductory book for ML currently available. It combines rigor and precision with accessibility, starting from a detailed explanation of the basic foundations of Bayesian analysis in the simplest of settings and goes all the way to the frontiers of the subject such as infinite mixture models, GPs and MCMC.

Devdatt Dubhashi, Professor, Department of Computer Science and Engineering, Chalmers University, Sweden: This textbook manages to be easier to read than other comparable books in the subject while retaining all the rigorous treatment needed. The new chapters put it at the forefront of the field by covering topics that have become mainstream in machine learning over the last decade.

Daniel George Mason, University of Fairfax, Virginia, USA: The new edition of A First Course in Machine Learning by Rogers and Girolami is an excellent introduction to the use of statistical methods in machine learning. The book introduces concepts such as mathematical modeling, inference and prediction, providing just in time the essential background on linear algebra, calculus and probability theory that the reader needs to understand these concepts.

Daniel Ortiz Arroyo, Associate Professor, Aalborg University, Esbjerg, Denmark: I was impressed by how closely the material aligns with the needs of an introductory course on machine learning, which is its greatest strength. Overall, this is a pragmatic and helpful book which is well aligned to the needs of an introductory course and one that I will be looking at for my own students in coming months.

David Clifton, University of Oxford, UK: The first edition of this book was already an excellent introductory text on machine learning for an advanced undergraduate or taught masters level course or indeed for anybody who wants to learn about an interesting and important field of computer science. The additional chapters of advanced material on Gaussian process, MCMC and mixture modeling provide an ideal basis for practical projects without disturbing the very clear and readable exposition of the basics contained in the first part of the book.

Gavin Cawley, Senior Lecturer, School of Computing Sciences, University of East Anglia, UK: This book could be used for junior/senior undergraduate students or first year graduate students as well as individuals who want to explore the field of machine learning. The book introduces not only the concepts but the underlying ideas on algorithm implementation from a critical thinking perspective.
