Macroeconomics 5 By Olivier Blanchard Solutions:

Lectures on Macroeconomics Olivier Blanchard, Stanley Fischer, 1989-03-21 The main purpose of Lectures on Macroeconomics is to characterize and explain fluctuations in output unemployment and movement in prices Lectures on Macroeconomics provides the first comprehensive description and evaluation of macroeconomic theory in many years While the authors perspective is broad they clearly state their assessment of what is important and what is not as they present the essence of macroeconomic theory today The main purpose of Lectures on Macroeconomics is to characterize and explain fluctuations in output unemployment and movement in prices The most important fact of modern economic history is persistent long term growth but as the book makes clear this growth is far from steady The authors analyze and explore these fluctuations Topics include consumption and investment the Overlapping Generations Model money multiple equilibria bubbles and stability the role of nominal rigidities competitive equilibrium business cycles nominal rigidities and economic fluctuations goods labor and credit markets and monetary and fiscal policy issues Each of chapters 2 through 9 discusses models appropriate to the topic Chapter 10 then draws on the previous chapters asks which models are the workhorses of macroeconomics and sets the models out in convenient form A concluding chapter analyzes the goals of economic policy monetary policy fiscal policy and dynamic inconsistency Written as a text for graduate students with some background in macroeconomics statistics and econometrics Lectures on Macroeconomics also presents topics in a self contained way that makes it a suitable reference for professional economists

Macroeconomics, Third Canadian Edition, Olivier Blanchard, David Johnson David W. Findlay, 2007 Rational Expectations Models with a Continuum of Convergent Solutions Michael Mussa, 1984 This paper examines five examples of rational expectations models with a continuum of convergent solutions and demonstrates serious difficulties in the economic interpretation of these solutions The five examples are 1 a model of optimal capital accumulation with a negative rate of time preference 2 Taylor s 1977 linear rational expectations model of macroeconomic equilibrium 3 Calvo s 1984 model of contract setting and price dynamics 4 Obstfeld s 1984 equilibrium model of monetary dynamics with individual optimizing agents and 5 Calvo s 1978 life cycle model of savings and asset valuation In every case when these models yield a continuum of convergent infinite horizon solutions these solutions fail to exhibit economically appropriate forward looking dependence of the endogenous variables on the paths of the exogenous forcing variables a difficulty that does not arise under the circumstances where these models yield unique convergent infinite horizon solutions Further the three models that have natural finite horizon versions either lack finite horizon solutions or have solutions that do not converge to any of the infinite horizon solutions Again this difficulty arises only under the circumstances where these models have a continuum of infinite horizon solutions

Essays in Macroeconomics Yuriy Gorodnichenko, 2007 **Journal of Economic Dynamics & Control** ,1991 Working Paper Series ,2002 **Taylor Rules in a Limited Participation Model** Lawrence J. Christiano, Christopher J. Gust, 1999 We use

the limited participation model of money as a laboratory for studying the operating characteristics of Taylor rules for setting the rate of interest Rules are evaluated according to their ability to protect the economy from bad outcomes such as the burst of inflation observed in the 1970s Based on our analysis we argue for a rule which i raises the nominal interest rate more than one for one with a rise in inflation and ii does not change the interest rate in response to a change in output relative to trend

New Econometric Techniques for Macroeconomic Policy Evaluation John B. Taylor,1984

Economically Sensible Solutions for Linear Rational Expectations Models with Forward and Backward Looking Dynamic Processes Michael Mussa,1984 Using variants of a modified version of Dornbusch's model of price level and exchange rate dynamics it is demonstrated that satisfaction of the formal condition for existence of a unique non explosive solution of a linear rational expectations model with forward and backward looking dynamic processes equality of the number of stable roots with the number of independent backward looking processes does not guarantee the economic sensibility of this solution even if one accepts the usual arguments for excluding speculative bubbles from the solutions of such models Moreover satisfaction of the formal condition for existence of an infinity of non explosive solutions for such rational expectations models more stable roots than independent backward looking processes does not assure that any of these solutions is economically sensible

New Perspectives on Monetary Policy, Inflation and the Business Cycle Jordi Galí,2002 The present paper provides an overview of recent developments in the analysis of monetary policy in the presence of nominal rigidities The paper emphasizes the existence of several dimensions in which the recent literature provides a new perspective on the linkages among monetary policy inflation and the business cycle It is argued that the adoption of an explicitly optimizing general equilibrium framework has not been superfluous on the contrary it has yielded many insights which by their nature could hardly have been obtained with earlier non optimizing models

The Mechanics of Devaluations and the Output Response in a DSGE Model Camilo Ernesto Tovar Mora,2005 The relative importance of different mechanisms through which devaluations affect output are analyzed using a dynamic stochastic general equilibrium model for a small open economy with imperfect competition and nominal rigidities Devaluations are defined as an increase in the central bank's nominal exchange rate target which induces a decrease in the nominal interest rate Three main mechanisms through which devaluations affect output are considered The traditional expansionary expenditure switching effect the balance sheet effect which allows the possibility of contractionary effects when firms debt are dollar denominated and a monetary channel associated with an interest rule that targets the nominal exchange rate The model is calibrated and simulated under alternative scenarios of

exchange rate regimes and shocks Devaluations are found to be expansionary despite the contractionary balance sheet effect In response to adverse external shocks the economy's output response improves with a devaluation the less flexible the exchange rate regime is Abstract **Index of Economic Articles in Journals and Collective Volumes** American Economic Association,1994 Spanish Unemployment Olivier J. Blanchard,1995 Is there a solution to Spanish unemployment This report contends that reducing Spain's current unemployment rate of 25% to 5% within 10 years should be the primary focus of Spain's economic policy Persistence of Unemployment Stephen R.G. Jones,1995-11-01 The deep recession and slow recovery of the Canadian economy in the 1980s and the lengthy recession of the early 1990s raised serious questions about economic policy making The steady worsening of Canadian unemployment rates led some economists to doubt the traditional view that the national economy is by nature self correcting and to endorse the concept of hysteresis the idea that the unemployment rate may display no tendency to return to an unchanging natural rate Such hysteresis would have important and far reaching implications for economic policy particularly monetary policy Jones provides an overview of leading theories of hysteresis and examines international and Canadian evidence from both microeconomic and macroeconomic perspectives He extends the econometric analysis of hysteresis at both the micro and macro levels and concludes that while there is some evidence of dependence in Canada the overall picture is not one of hysteresis
