Social BPM Keith D. Swenson, 2011-01-01 Business Process Management and Workflow are by their very nature social activities The collaboration and communication patterns that are now increasingly referred to as social computing were also fundamental to the BPM and workflow models of the early 1990s Yet it has been the recent explosion of social computing and accompanying success of social production from Linux to Wikipedia and Facebook to Twitter which have had the most dramatic impact on collaboration in business environments Today we see the transformation of both the look and feel of BPM technologies along the lines of social media as well as the increasing adoption of social tools and techniques democratizing process development and design It is along these two trend lines the evolution of system interfaces and the increased engagement of stakeholders in process improvement that Social BPM has taken shape

How Industry Analysts Shape the Digital Future Neil Pollock, Robin Williams, 2016-01-14 Industry analysts are in the business of shaping the technological and economic future They attempt to predict what will become the next big thing to spot new emerging trends and paradigms to decide which hi tech products will win out over others and to figure out which technology vendors can deliver on their promises In just a few short years they have developed a surprising degree of authority over technological innovation Yet we know very little if anything about them This book seeks to explain how this was achieved and on what this authority rests Who are the experts who increasingly command the attention of vendor and user communities What is the nature of this new form of technical and business knowledge How Industry Analysts Shape the Digital Future offers the first book length study into this rarely scrutinized form of business expertise Contributions to this volume show how from a small group of mainly North American players which arose in the 1970s Gartner Inc has emerged as clear leader of a 6 billion industry that involves several hundred firms worldwide Through interviews and observation of Gartner Inc and other industry analyst firms the book explores how these firms create their predictions market classifications and rankings as well as with how these outputs are assessed and consumed The book asks why many social scientists have ignored the proliferation of these new forms of management and technical expertise In some cases scholars have deflated this kind of business acumen portraying it as arbitrary knowledge whose methods and content do not deserve enquiry The valuable exception here has been the path breaking work on the performativity of economic financial or accounting knowledge Drawing upon recent performativity arguments the book argues the case for a Sociology of Business Knowledge
