Materials, Devices and Systems for Sustainability Sudarshan Narayanan, Laltu Chandra, Deepika Jhahria, 2025-10-22 This book explores groundbreaking advancements in science and technology aimed at creating a sustainable future. It covers key innovations in renewable energy, clean hydrogen production, next generation energy storage, carbon capture, and resilient infrastructure. The first section examines materials for a sustainable ecosystem, viz. solar energy harvesting and storage, including methods to improve perovskite solar cells, solar thermal based ammonia cracking, challenges in commercializing solid state electrolyte batteries, and S-scheme heterojunctions for efficient photocatalysis. Herein the book also proposes a novel framework integrating mobile microgrids into power distribution networks to enhance resilience in the context of RE integration. It then shifts to devices and methods for achieving low carbon industrial processes, discussing molten catalytic systems and CO₂ capture via engineered biochar. Beyond technology, the book then addresses India's renewable energy policies and the need for zero carbon steel, exploring carbon capture solutions for the steel and cement industries while also highlighting the necessity for energy transition modelling. With a blend of scientific insights and policy recommendations, this book serves as a valuable resource for researchers, policymakers, and anyone interested in driving sustainable progress.

Water Soluble Polymers Zahid Amjad, 2007-05-08 This volume contains a series of papers originally presented at the symposium on Water Soluble Polymers: Solution Properties and Applications sponsored by the Division of Colloids and Surface Chemistry of the American Chemical Society. The symposium took place in Las Vegas, City, Nevada, on 9 to 11th September 1997 at the 214th American Chemical Society National Meeting. Recognized experts in their respective fields were invited to speak. There was a strong attendance from academia, government, and industrial research centers. The purpose of the symposium was to present and discuss recent developments in the solution properties of water soluble polymers and their applications in aqueous systems. Water soluble polymers find applications in a number of fields of which the following may be

worth mentioning cosmetics detergent oral care industrial water treatment g thermal wastewater treatment water purification and reuse pulp and paper production sugar refining and many more Moreover water soluble polymers play vital role in the oil industry especially in enhanced oil recovery Water soluble polymers are also used in ag culture and controlled release pharmaceutical applications Therefore a fundamental knowledge of solution properties of these polymers is essential for most industrial scientists An understanding of the basic phenomena involved in the application of these polymers such as adsorption and interaction with different substrates i.e. tooth enamel hair reverse osmosis membrane heat exchanger surfaces etc is of vital importance in developing high performance formulations for achieving optimum efficiency of the system
