

Electric Circuits

- Consider the two requirements for an electric circuit (described in question #1). When a light bulb is burned out and no longer works, requirement #_____ is not met. When a battery no longer works, requirement #_____ is not met.
- What do you believe? Respond to the following statements as being **TRUE** or **FALSE**.
 - When a battery no longer works, it is out of charge and must be re-charged before it can be used again. T or F
 - A battery can be a source of charge in a circuit. The charge which flows through the circuit originates in the battery. T or F
 - Charge becomes used up as it flows through a circuit. The amount of charge which exits a light bulb is less than the amount which enters the light bulb. T or F
 - Charge flows through circuits at very high speeds. This explains why the light bulb turns on immediately after the wall switch is flipped. T or F
 - Commonwealth Edison supplies millions and millions of electrons to our homes everyday. T or F

- A current is said to exist whenever _____.
 - a wire is charged
 - a battery is present
 - electric charges are unbalanced
 - electric charges move in a loop
- As a quantity, electric current is defined as the _____.
 - amount of charge present in a circuit
 - potential energy per charge
 - rate at which charge moves through a cross-sectional area of a wire
 - speed at which charge moves from one location to another location

- Complete the statements:

- A current of one ampere is a flow of charge at the rate of _____ coulomb per second.
- When a charge of 8 C flows past any point along a circuit in 2 seconds, the current is _____ A.
- If 5 C of charge flow past point A (diagram at right) in 10 seconds, then the current is _____ A.
- If the current at point D is 2.0 A, then _____ C of charge flow past point D in 10 seconds.
- If 12 C of charge flow past point A in 3 seconds, then 8 C of charge will flow past point E in _____ seconds.
- TRUE or FALSE:**

The current at point E is considerably less than the current at point A since charge is being used up in the light bulbs.

- Which sentence best describes what happens to charge as it moves through an electric circuit?
 - Charge is consumed or used up.
 - Charge is re-energized and recycled.
- Which sentence best describes how fast charge moves through an electric circuit?
 - Charge moves very fast; faster than any human can run.
 - Charge moves very slow; slower than the proverbial snail.
- When you turn on the room lights, they light immediately. This is best explained by the fact that _____.
 - electrons move very fast from the switch to the light bulb filament.
 - electrons present everywhere in the circuit move instantly.
