Timmerhaus, 1972 Plant Design and Economics for Chemical Engineers Max Stone Peters, Klaus D. Timmerhaus, 1980 Plant Design and Economics for Chemical Engineers Max S. Peters, Klaus D. Timmerhaus, 1968

The fifth edition of *Plant Design and Economics for Chemical Engineers* is a major revision of the popular fourth edition. There are new chapters on process synthesis, computer aided design, and design of chemical reactors. A traditionally strong feature of the text, economic analysis, has been revamped and updated. Another strength, equipment sizing and cost estimation, is updated and expanded as well. These improvements also reflect changes in equipment availability. The numerous real examples throughout the book include computer or hand solutions and often both. There is a new increased emphasis on computer use in design, economic evaluation, and optimization. Concepts, strategies, and approaches to computer use are featured. These concepts are not tied to particular software programs and therefore apply to a wide range of applications. Software of both current and future release. This widely used text is now more useful than ever, providing a one stop guide to chemical process design and evaluation.

Product and Process Design Principles Warren D. Seider, Daniel R. Lewin, J. D. Seader, Soemantri Widagdo, Rafiqul Gani, Ka Ming Ng, 2016-05-17

The new 4th edition of Seider's *Product and Process Design Principles: Synthesis, Analysis, and Design* covers content for process design courses in the chemical engineering curriculum, showing how process design and product design are interlinked and why studying the two is important for modern applications. A principal objective of this new edition is to describe modern strategies for the design of chemical products and processes with an emphasis on a systematic approach. This fourth edition presents two parallel tracks: 1. product design and 2. process design, with an emphasis on process design. Process design instructors can show easily how product designs lead to new chemical processes. Alternatively, product design can be taught in a separate course subsequent to the process design course.
