Competitiveness**

Pltw Train Project Parts:

On Board, 2003 *STEM Models of Success* J. Luke Wood, Robert T. Palmer, 2014-03-01 As the U S focuses on positioning itself to retain and advance its status as a world leader in technology and scientific innovation a recognition that community colleges are a critical site for intervention has become apparent Community colleges serve the lion s share of the nation s postsecondary students In fact 40% of all undergraduate students are enrolled in community colleges these students account for nearly 30% of all STEM undergraduate majors in postsecondary institutions These students serve as a core element of the STEM pipeline into four year colleges and universities via the community college transfer function Moreover community colleges are the primary postsecondary access point for non traditional students including students of color first generation low income and adult students This is a particularly salient point given that these populations are sordidly underrepresented among STEM graduates and in the STEM workforce Increasing success among these populations can contribute significantly to advancing the nation s interests in STEM As such the community college is situated as an important site for innovative practices that have strong implications for bolstering the nation s production and sustenance of a STEM labor force In recognition of this role the National Science Foundation and private funding agencies have invested millions of dollars into research and programs designed to bolster the STEM pipeline From this funding and other independently sponsored inquiry promising programs initiatives and research recommendations have been identified These efforts hold great promise for change with the potential to transform the education and outcome of STEM students at all levels This important book discusses many of these promising programs initiatives and research based recommendations that can impact the success of STEM students in the community college This compilation is timely on the national landscape as the federal government has placed increasing importance on improving STEM degree production as a strategy for America s future stability in an increasingly competitive global marketplace Informed by research and theory each chapter in this volume blazes new territory in articulating how community colleges can advance outcomes for students in STEM particularly those from historically underrepresented and underserved communities **Press Summary - Illinois Information**
