Global Climate Change Demystified James G. Speight, 2019-12-17 Tackling one of the most controversial subjects of our time one of the world s foremost environmental and petroleum engineers explores the potential causes and ramifications of global climate change For too many years climate change also referred to as global warming has been assigned predominantly to the emissions of carbon dioxide through the combustion of fossil fuels It must never be forgotten or ignored however that the Earth has been constantly changing since its formation and has gone through different eras like glaciations among others These changes need thousands of years to be made visible and are likely still continuing given the increase in the average temperature of the Earth since the pre industrial period provided that the measurements of past climatic temperatures are accurate and beyond reproach It follows that the warming trend that has occurred over the past 100 years is very likely to have some origins in natural events as well as in human activity The precise contributions of natural effects and anthropogenic effects on the climate are not known but it is accurate to conclude that many factors continue to influence climate Whether or not human activities have become a dominant force in the changing climate and are responsible for most of the warming observed is still open to question When studying the climate system of the Earth an area of common confusion is whether climate scientists agree or disagree as to whether or not climate change is happening or if it is happening whether or not humans are the primary cause There are a variety of reasons for this but a majority of scientists who study climate and publish in peer reviewed journals agree that human activity is causing the warming of the Earth The purpose of this book is to weigh all of these various data points and in a scientific and unemotional way arrive at likely

conclusions regarding global climate change Whether human activity is the main driver behind our current changes in climate one thing is certain Climate change is happening and we all need to make informed rather than emotional decisions

The Ecological Consequences of Global Climate Change F. I. Woodward,1992 Global Warming John Houghton,2015-05-07 How much of global warming is due to human activities How far will it be possible to adapt to changes of climate Sir John Houghton s definitive full colour guide to climate change answers these questions and more by providing the best and latest information available including the latest IPCC findings The simple logical flow of ideas gives an invaluable grounding in the science as well as the physical and human impacts of climate change for undergraduate students across a wide range of disciplines Accessible to both scientists and non scientists the text avoids mathematical equations and includes more technical material in boxes while simple figures help students to understand the conclusions the science leads to without being overwhelmed by vast amounts of data Questions for students to consider and test their understanding are included in each chapter along with carefully selected further reading to expand their knowledge Biology and Palaeobiology of Global Climate Change ,1990 *Climate Change Impacts on Plant Biomass Growth* Mohammad Ali,2012-09-03 This book offers a methodical explanation of our biomass driven ecosystem the undeniable uncertainties posed by the response of vegetation to changes in environmental conditions and the fact that humans everywhere have an interest even an obligation to cooperate in a global campaign to combat climate change **Climate Change** Joseph J. Romm,2018 Everyone needs to understand how climate change will directly affect their lives and the lives of their family in the years to come This is the first general audience book aimed at giving you and your family the knowledge you need to know to navigate your future Global Warming and Biological Diversity Robert L. Peters,Thomas E. Lovejoy,1992-01-01 The biological effects of global warming should be of concern to all thinking individuals for warming could cause profound disruption of natural ecosystems and could threaten many species with extinction This important book the first to discuss in detail the consequences of global warming for ecosystems includes commentary by distinguished scientists on many aspects of this critical problem Experts describe responses of animals and plants to previous climate changes interactions between various environmental components precipitation and soil chemistry for example and synergisms between climate change and human activities such as deforestation They consider many specific ecosystems including tropical forests the deciduous forests of eastern North America the forests of the Pacific Northwest Mediterranean type ecosystems in California arctic tundra and arctic marine systems Offering discussions that are both factual and speculative the volume points the way to future investigations of the implications of global warming Complex Biological Systems Karl Y. Biel,Vladislav G. Soukhovolsky,Irina R. Fomina,2018 Global climate change is one of the most serious and pressing issues facing our planet Rather than a silver bullet or a single study that solves it the study of global climate change is like a beach with each contribution a grain of sand gathered together as a whole to create a big picture moving the science forward This new

groundbreaking study focuses on the adaptation and tolerance of plants and animal life to the harsh conditions brought on by climate change or global warming Using the papers collected here scientists can better understand global climate change its causes results and ultimately the future of life on our planet The first section lays out a methodology and conceptual direction of the work as a whole covering the modeling approaches and the impacts studied throughout the book The second section focuses on certain hypotheses laid out by the authors regarding how plants and animal life can adapt and survive in extreme environments The third section compiles a series of ecological experiments and their conclusions and a final section is dedicated to previous scientific breakthroughs in this field and the scientists who made them

Climate Change Biology

Lee Hannah,2021-05-11 Climate Change Biology Third Edition addresses how climate change may affect life on the planet particularly its impact on biology Presented in three parts it deals extensively with the physical evidence of climate change and modeling efforts to predict its future Biological responses are then addressed from individual physiology to populations and ecosystems adaptation and evolution The final section examines the specific impact climate change may have on natural resources particularly relating to human livelihood This book will be a useful asset to the growing number of both undergraduate and graduate courses on climate change All sections are updated using the more than 5 000 research papers that have appeared on the topic since the publication of the second edition Sections on the combined effects of ocean acidification and climate change are especially strengthened with over six new case studies and end of chapter questions in each chapter Covers the evolving discipline of human induced climate change and the resulting shifts in the distributions of species and timing of biological events Offers positive solutions and policy relevant insights on how extinctions can be avoided Includes stunning full color illustrations from original research
