Lab Activity 3 Questions:

1. Examine your data. Comparing your first two populations, with and without predation, how did predation influence the population?

Predation caused the second population to be extremely different from the first. As a result of this predation, the fur color frequency to be 100% for the light brown fur, the RLRL genotype frequency to be 100%, and the RL allele frequency to be 100%. This means that because of predation, the RL phenotype/genotype/allele became the homozygous dominant gene.

2. Based on your observations, did mutation affect the population over time? How?

Mutations caused another shift in the third population, as it restored some percentage to the medium and dark fur colors, RLRD, RDRL, and RDRD genotype frequencies, and RD allele frequency. In the third population, it seem to have a greater effect on the heterozygous genotypic frequency, as it ended up with 44% compared to the RLRLs 29%. So, while predation had the greatest effect on the homozygous dominant (LL) gene, mutation seemed to have the greatest effect on the heterozygous (LD) gene.

Population Genetics Lab Answers Kim Foglia:

Cumulated Index Medicus, 1989 *Agrindex*, 1995 **Human Populations, Genetic Variation, and Evolution**
Laura Newell Morris, 1971 **Introduction to Theoretical Population Genetics** Thomas Nagylaki, 1992 This book covers those areas of theoretical population genetics that can be investigated rigorously by elementary mathematical methods. An attempt has been made to formulate the various models fairly generally and to state the biological assumptions quite explicitly. The choice and treatment of topics should enable the reader to understand and evaluate detailed analyses of many specific models and applications in the literature. The material suffices for a one year course and is almost entirely self contained. The little basic genetics needed for understanding it is presented in the text. Calculus and linear algebra are used freely. Previous exposure to elementary probability theory would be helpful. The major mathematical theme of the book is the dynamical analysis of recursion relations. Many exact and approximate techniques for investigating linear and nonlinear recursion relations in one dimension and in several dimensions are developed and applied. The problems are an essential part of this book. Although some of them ask the reader merely to supply details of derivations in the text many illuminate, rigorize or extend these derivations. Some of the results in the problems are useful and important. They vary in difficulty; the harder ones offer a challenge even to good students.
