Foundations of Computational Intelligence Volume 5 Ajith Abraham, Aboul-Ella Hassanien, Vaclav Snášel, 2009-07-11

Foundations of Computational Intelligence Volume 5 Function Approximation and Classification Approximation theory is that area of analysis which is concerned with the ability to approximate functions by simpler and more easily calculated functions. It is an area which like many other fields of analysis has its primary roots in the mathematics. The need for function approximation and classification arises in many branches of applied mathematics, computer science and data mining in particular. This edited volume comprises of 14 chapters including several overview chapters which provides an up to date and state of the art research covering the theory and algorithms of function approximation and classification. Besides research articles and expository papers on theory and algorithms of function approximation and classification, papers on numerical experiments and real world applications were also encouraged. The Volume is divided into 2 parts: Part I: Function Approximation and Classification: Theoretical Foundations; Part II: Function Approximation and Classification: Success Stories and Real World Applications. Part I on Function Approximation and Classification: Theoretical Foundations contains six chapters that describe several approaches: Feature Selection, the use of Decomposition, Correlation, Integral, Some Issues on Extensions of Information and Dynamic Information System and a Probabilistic Approach to the Evaluation and Combination of Preferences. Chapter 1: Feature Selection for Partial Least Square Based Dimension Reduction by Li and Zeng investigate a systematic feature reduction framework by combining dimension reduction with feature selection. To evaluate the proposed framework, authors used four typical data sets.

A General Introduction to Data Analytics João Moreira, Andre Carvalho, Tomás Horvath, 2018-06-25

A guide to the principles and methods of data analysis that does not require knowledge of statistics or programming. *A General Introduction to Data Analytics* is an essential guide to understand and use data analytics. This book is written using easy to understand terms and does not require familiarity with statistics or programming. The authors, noted experts in the field, highlight an explanation of the intuition behind the basic data analytics techniques. The text also contains exercises and illustrative examples. Thought to be easily accessible to non-experts, the book provides motivation to the necessity of analyzing data. It explains how to visualize and summarize data and how to find natural groups and frequent patterns in a dataset. The book also explores predictive tasks, be them classification or regression. Finally, the book discusses popular data analytic applications like mining the web, information retrieval, social network analysis, working with text and recommender systems. The learning resources offer a guide to the reasoning behind data mining techniques. A unique illustrative example that extends throughout all the chapters. Exercises at the end of each chapter and larger projects at the end of each of the texts' two main parts. Together with these learning resources, the book can be used in a 13-week course, guide one chapter per course topic. The book was written in a format that allows the understanding of the main data

Cooperative Intelligent Robotics in Space II William E. Stoney,1992 *Intelligent Signal Processing* Simon Haykin,Bart Kosko,2001-01-15 IEEE Press is proud to present the first selected reprint volume devoted to the new field of intelligent signal processing ISP ISP differs fundamentally from the classical approach to statistical signal processing in that the input output behavior of a complex system is modeled by using intelligent or model free techniques rather than relying on the

shortcomings of a mathematical model Information is extracted from incoming signal and noise data making few assumptions about the statistical structure of signals and their environment Intelligent Signal Processing explores how ISP tools address the problems of practical neural systems new signal data and blind fuzzy approximators The editors have compiled 20 articles written by prominent researchers covering 15 diverse practical applications of this nascent topic exposing the reader to the signal processing power of learning and adaptive systems This essential reference is intended for researchers professional engineers and scientists working in statistical signal processing and its applications in various fields such as humanistic intelligence stochastic resonance financial markets optimization pattern recognition signal detection speech processing and sensor fusion Intelligent Signal Processing is also invaluable for graduate students and academics with a background in computer science computer engineering or electrical engineering About the Editors Simon Haykin is the founding director of the Communications Research Laboratory at McMaster University Hamilton Ontario Canada where he serves as university professor His research interests include nonlinear dynamics neural networks and adaptive filters and their applications in radar and communications systems Dr Haykin is the editor for a series of books on Adaptive and Learning Systems for Signal Processing Communications and Control Publisher and is both an IEEE Fellow and Fellow of the Royal Society of Canada Bart Kosko is a past director of the University of Southern California's USC Signal and Image Processing Institute He has authored several books including Neural Networks and Fuzzy Systems Neural Networks for Signal Processing Publisher copyright date and Fuzzy Thinking Publisher copyright date as well as the novel Nanotime Publisher copyright date Dr Kosko is an elected governor of the International Neural Network Society and has chaired many neural and fuzzy system conferences Currently he is associate professor of electrical engineering at USC Proceedings of the Workshop on Picture Data Description and Management, 1977
