Voet, Charlotte W. Pratt, 2002-08-05 **Macrocylic and Supramolecular Chemistry** Reed M. Izatt, 2016-05-31 This book commemorates the 25th anniversary of the International Izatt Christensen Award in Macrocylic and Supramolecular Chemistry The award one of the most prestigious of small awards in chemistry recognizes excellence in the developing field of macrocylic and supramolecular chemistry Macrocylic and Supramolecular Chemistry How Izatt Christensen Award Winners Shaped the

Field features chapters written by the award recipients who provide unique perspectives on the spectacular growth in these expanding and vibrant fields of chemistry over the past half century and on the role of these awardees in shaping this growth. During this time there has been an upsurge of interest in the design, synthesis and characterization of increasingly more complex macrocyclic ligands and in the application of this knowledge to understanding molecular recognition processes in host-guest chemistry in ways that were scarcely envisioned decades earlier. In October 2016, Professor Jean-Pierre Sauvage and Sir J. Fraser Stoddart (author for chapter 22, *Contractile and Extensile Molecular Systems Towards Molecular Muscles* by Jean-Pierre Sauvage, Vincent Duplan and Frédéric Niess) and 20 Serendipity by Paul R. McGonigal and J. Fraser Stoddart respectively were awarded the Nobel Prize in Chemistry alongside fellow Wiley author Bernard Feringa for the design and synthesis of molecular machines.

Neuromuscular Fundamentals Nassir H. Sabah, 2020-11-29. This book is rather unique in its approach and coverage. The approach is essentially that of an engineering textbook, emphasizing the quantitative aspects and highlighting the fundamentals and basic concepts involved. The coverage progresses in a logical and systematic manner from the subcellular, starting with the electrophysiology of the cell membrane, then proceeding to synapses, neurons and muscle, before considering neuronal motor ensembles and the neuromuscular system as a whole. Simple, clear and comprehensive explanations are given throughout. After an introductory chapter on some background material in biology, biophysics and chemical kinetics, a substantial part of the book (Chapters 2-8) necessarily covers in considerable detail the basic components and processes that underlie the electrical and associated activities of the nervous system. The remaining chapters of the book (Chapters 9-13) focus on the neuromuscular system, starting with the structure of muscle cells, the generation of force by muscular contraction and muscle receptors. The last chapter examines aspects of the control of movement, motor learning and memory, the maintenance of posture and locomotion, and critically examines some of the theories that have been advanced to explain how movement is controlled. The book is intended for undergraduate or graduate students in the natural sciences, mathematics or engineering who seek a deeper understanding of the fundamentals of neuroscience and the somatomotor system in accordance with the aforementioned objectives. The book can serve as a textbook for a one-semester course on the neuromuscular system or as a reference in a more general course on neuroscience. Provides a thorough analytical treatment of membrane electrophysiology starting from the first principles. Emphasizes strongly the basic and fundamental concepts throughout. Discusses thoroughly the essential features and properties of the basic constituents of the nervous system, that is, neurons and synapses, including the neuromuscular junction. Explains the main aspects of posture, locomotion and control of movement. Includes practice problems throughout the text, and a solutions manual will be available for adopting professors. Nassir Sabah is professor of biomedical engineering in the electrical and computer engineering department at the American University of Beirut, Lebanon. He received his B.Sc. (Hons. Class I) and his M.Sc. in electrical engineering from the University of Birmingham, U.K., and his Ph.D. in biophysical sciences from the State

University of New York SUNY Buffalo He has served as Chairman of the Electrical Engineering Department Director of the Institute of Computer Studies and Dean of the Faculty of Engineering and Architecture at the American University of Beirut In these capacities he was responsible for the development of programs curricula and courses in electrical biomedical communications and computer engineering Professor Sabah has extensive professional experience in the fields of electrical engineering electronics and computer systems with more than 35 years teaching experience in neuroengineering biomedical engineering electronics and electric circuits He has over 100 technical publications mainly in neurophysiology biophysics and biomedical instrumentation He has served on numerous committees and panels in Lebanon and the region He is a Fellow of the Institution of Engineering and Technology IET U K a member of the American Association for the Advancement of Science AAAS and a member of the American Society for Engineering Education ASEE
