Gas Turbine Combustion:

Design of Modern Turbine Combustors A. M. Mellor, 1990 Lower pollutant emissions and broader multifuel flexibility are driving forces for advancing aircraft vehicular and industrial engine performance and versatility Both are inherently connected with the design of the fuel injector and combustor system The traditional concerns improving durability and fuel economy over the life of the engine remain additional requirements This volume offers a comprehensive treatment of modern practice aimed both at those in the field and newcomers interested in research and development for gas turbine combustors Detailed description and assessment of a range of combustor design models and methods Specification and evolution of fuels and fuel injectors System models for fuel effects on engines and airframes Evaluation of laser based measurement techniques for combustor flow field studies

Combustion in Advanced Gas Turbine Systems I. E. Smith, 2014-05-17 Cranfield International Symposium Series Volume 10 Combustion in

Advanced Gas Turbine Systems covers the proceedings of an International Propulsion Symposium held at the College of

Aeronautics in Cranfield in April 1967 The book focuses on the processes methodologies reactions and transformations

involved in chemical combustion The selection first takes a look at the design considerations in advanced gas turbine

combustion chambers combustion in industrial gas turbines and combustion development on the Rolls Royce Spey engine

Discussions focus on mechanical condition carbon formation and exhaust smoke system requirements fuel oil ash deposition

and corrosion combustion system design performance requirements types of primary zone fuel injection and combustion

chamber types The text then examines subsonic flow flameholder studies using a low pressure simulation technique

stabilization of hydrogen diffusion flames by flame holders in supersonic flow at low stagnation temperatures and

augmentation systems for turbofan engines The book takes a look at a consideration of the possible use of refractory ceramic

materials for advanced combustion chamber design cooling of flame tubes by steam injection and combustion problems in the

massive steam injection gas turbine The selection is a valuable source of information for researchers interested in the

process of combustion in advanced gas turbine systems *Flashback Mechanisms in Lean Premixed Gas Turbine*

Combustion Ali Cemal Benim, Khawar Jamil Syed, 2014-12-01 Blending fuels with hydrogen offers the potential to reduce NO_x

and CO₂ emissions in gas turbines but doing so introduces potential new problems such as flashback Flashback can lead to

thermal overload and destruction of hardware in the turbine engine with potentially expensive consequences The little

research on flashback that is available is fragmented *Flashback Mechanisms in Lean Premixed Gas Turbine Combustion* by

Ali Cemal Benim will address not only the overall issue of the flashback phenomenon but also the issue of fragmented and

incomplete research Presents a coherent review of flame flashback a classic problem in premixed combustion and its connection with the growing trend of popularity of more efficient hydrogen blend fuels Begins with a brief review of industrial gas turbine combustion technology Covers current environmental and economic motivations for replacing natural gas with hydrogen blend fuels **GAS Turbine Combustion, Second Edition** Arthur H. Lefebvre, 1998-09-01 This revised edition provides understanding of the basic physical chemical and aerodynamic processes associated with gas turbine combustion and their relevance and application to combustor performance and design It also introduces the many new concepts for ultra low emissions combustors and new advances in fuel preparation and liner wall cooling techniques for their success It details advanced and practical approaches to combustor design for the clean burning of alternative liquid fuels derived from oil shades tar sands and coal Additional topics include diffusers combustion performance fuel injection combustion noise heat transfer and emissions *Combustion and Fuels in Gas Turbine Engines* ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT NEUILLY-SUR-SEINE (France), 1988 The design of gas turbine combustion chambers is becoming increasingly more sophisticated as demands on performance increase and combustor operating conditions become more and more harsh The design compromises which account for much of the art in successful combustor design have become more difficult as gas turbine cycles reach higher pressure and temperature levels and design objectives become more rigorous This is particularly true for military applications of gas turbines for both manned and unmanned aircraft Concurrently there is significant pressure for the combustor designer to reduce development time and cost reduce life cycle costs increase fuel tolerance and continue to minimize the environmental impact of the combustion process In the past two decades an increasing amount of fundamental knowledge of chemical aerodynamic and thermal phenomena plus a more detailed understanding of sprays has been applied with considerable success to practical combustor design The papers presented at this symposium *Combustion and Fuels in Gas Turbine Engines* are categorized under the following four subject headings Alternative Fuels and Fuel Injection Combustor Development Soot and Radiation and Combustion Modeling Keywords NATO furnished After burners Alternative fuels Atomization drops Distribution Soot *Gas Turbine Emissions* Timothy C. Lieuwen, Vigor Yang, 2013-07-08 The development of clean sustainable energy systems is a preeminent issue in our time Gas turbines will continue to be important combustion based energy conversion devices for many decades to come used for aircraft propulsion ground based power generation and mechanical drive applications This book compiles the key scientific and technological knowledge associated with gas turbine emissions into a single authoritative source *Gas Turbine Combustion and fuels technology* E. Karl Bastress, 1977 **Design and Performance of Gas Turbine Power Plants** William R. Hawthorne, Walter T. Olson, 2015-12-08 Volume XI of the High Speed Aerodynamics and Jet Propulsion series Edited by W R Hawthorne and W T Olson This is a comprehensive presentation of basic problems involved in the design of aircraft gas turbines including sections covering requirements and processes experimental techniques fuel injection

flame stabilization mixing processes fuels combustion chamber development materials for gas turbine applications turbine blade vibration and performance Originally published in 1960 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Combustion and Heat Transfer in Gas Turbine Systems E. R. Norster, 2013-10-22 Combustion and Heat Transfer in Gas Turbine Systems is a compilation of papers from the Proceedings of an International Propulsion Symposium held at the College of Aeronautics Cranfield in April 1969 This compilation deals with research done by academic and scientific institutions and of industrial organizations with some research papers covering atomization fuels and high temperature materials One paper describes the combustion system of the Concorde engine used in commercial flights temperature of metal parts and some design modifications to increase the mechanical life of the combustion system Another paper discusses the evolution of the RB 162 combustion system that is used in the vertical takeoff and landing aircrafts The RB 162 has many design features of the earlier single reversal chamber and differs in only one or two points The book then notes the necessity of a plenum chamber burning to further development of supersonic engines and flight One paper also proposes an alternative theory to the traditional ignition theory of altitude relighting such as those developed by Lewis and von Elbe Another paper reposts on some observations made of the atomizing characteristics of air blast atomizers and proposes simple changes to improve the performance of the atomizer by prefilming and allowing air to both sides of the fuel This compilation will prove very helpful for aeronautical engineers aviation designers physicists students of engineering and readers who are interested in the design and development of jet engines and supersonic aircrafts
