Maliska, 2023-01-19 This book presents the developments of the finite volume method applied to fluid flows starting from the foundations of the method and reaching the latest approaches using unstructured grids It helps students learn progressively creating a strong background on CFD The text is divided into two parts The first one is about the basic concepts of the finite volume method while the second one presents the formulation of the finite volume method for any kind of domain discretization In the first part of the text for the sake of simplicity the developments are done using the Cartesian coordinate system without prejudice to the complete understanding The second part extends this knowledge to curvilinear and unstructured grids As such the book contains material for introductory courses on CFD for under and graduate students as well as for more advanced students and researchers

Building Better - Less - Different: Clean Energy Transition and Digital Transformation Felix Heisel, Dirk E. Hebel, 2023-11-06 Sustainability Sustainability is to become the guiding principle of social action and economic activity At the same time its ways and means are far from clear As a holistic praxis sustainability must combine technical and material as well as social economic ecological and also ethical strategies which have multiple complex interactions and all too often also conflicting goals and priorities In no other field can these be better observed addressed and influenced than in architecture and building Building Better Less Different Each volume of Building Better Less Different details two fundamental areas of sustainability and explores their specific dynamics and interactions After introductory overviews innovative methods and current developments are described and analysed in in depth essays international case studies and pointed commentaries The sustainability criteria of efficiency better sufficiency less and consistency different form the framework for each book What the press say about the first volume Circular Construction and Circular Economy The articles case studies and commentaries in this book make a major contribution to advancing the current discourse on implementing circular based economic models in the building sector Hessian Chamber of Architects book reviews To think of tomorrow when building today is the core message that Dirk E Hebel and Felix Heisel want to convey to their readers And they also show us how with the help of relevant examples grouped under the headings better less and different they demonstrate concrete applications and argue that circular construction can also benefit the construction industry architektur aktuell Clean energy transition It has long been common knowledge that energy and sustainability are closely interlinked And yet we are witnessing a profound shift in the sector While the earlier focus was on improving energy efficiency and increasing the proportion of renewable energy in buildings current energy conservation policies are supporting a broader more holistic view This encompasses integral approaches in which building design and construction measures form part of the energy concept from the outset as well as accounting for grey energy in building materials and a holistic evaluation of buildings over their entire life cycle For the energy intensive and emission producing building sector climate change presents an even greater challenge than conserving resources How can we contribute to a shift in heating strategies and employ new technologies to achieve

climate neutral heating How can we respond to rising temperatures and the risk of increased energy consumption for cooling Can low tech concepts help to reduce the environmental impact of buildings over their life cycle Shouldn t we take greater account of the users of buildings and do we need completely different energy supply strategies Digital Transformation At a time of natural ubiquity of digital tools widely adopted to streamline project delivery in architecture the foundations have been laid for a profound transformation of the construction industry to address the climate crisis Digital architectural design and construction methods can be used as enabling technologies for a fundamental change towards a circular construction approach with significantly reduced ecological and climate impact This approach comprises a digital reinterpretation of natural building materials through digital construction technologies Digital deconstruction and reuse strategies can transform the existing building stock into resources for the future Mass customization of tailor made building components minimizes resource consumption Architects in their emerging role as interdisciplinary interface and digital master builders reunite design and making through digital craft Finally the book provides a glimpse into the potential future of construction which might be characterized by fundamentally different concepts of design and materialization of our built environment challenging current paradigms within our discipline Proceedings of the American Institute of Electrical Engineers ,1925 Vols for 1887 1946 include the preprint pages of the institute s Transactions *Journal of the American Institute of Electrical Engineers* American Institute of Electrical Engineers,1925 Includes preprints of Transactions of the American Institute of Electrical Engineers ISSN 0096 3860 **Radiative Heat Transfer** Michael F. Recent Advances in Engineering Science Severino L. Koh, Charles G. Speziale, 2012-12-06 The 25th Anniversary Meeting of the Society of Engineering Science was held as a joint conference with the Applied Mechanics Division of the American Society of Mechanical Engineers at the University of California Berkeley from June 20-22, 1988 With the encouragement and support of the SES we decided to organize a symposium in honor of A C Eringen the founding president of the Society of Engineering Science who provided pioneering leadership during the critical first decade of the Society's existence We felt that there was no better way to do this than with a Symposium on Engineering Science the field that A C Eringen has devoted his life to Professor Eringen had the foresight even in his own early work to see the need for an intimate amalgamation of engineering and science transcending the bounds of the traditional engineering disciplines to address unsolved problems of technological importance Sustained by the belief that there was the need to provide a forum for researchers who had embraced this broader interdisciplinary approach Professor Eringen founded the Society of Engineering Science and the International Journal of Engineering Science in 1963 Since that time he has made countless contributions to the advancement of engineering science through his research educational and organizational activities The

participants in the Symposium were former students and colleagues of Professor Eringen who have been strongly influenced by his professional activities and research in engineering science
