Fundamental Aspects of Electrometallurgy Konstantin Popov, Branamir Grgur, Stojan S. Djokić, 2013-10-03 Electrometallurgy is a broad field but it is not a new one It was the great Faraday in the 1830s who discovered laws covering the electrodeposition of metals and its relation to the current passed and equivalent weight of the metal undergoing deposition Since that time applications and developments of his discoveries have spread to many areas of technology Electrowinning is the most well known partly because it embraces the process by which aluminum is extracted from its ores In electrorefining the impure metal is made into anode and the pure metal dissolved therefrom is deposited on a cathode Electroplating is exemplified by its use in the manufacture of car bumpers Finally in electrorefining objects may be metallized often with a very thin layer of the coating desired The numerous technologies vary greatly in the degree to which they are intellectualized Until the work of Popov et al electrometallurgy has been regarded as largely empirical an activity in which there was much art and little science This will all change with the publication of this book Several aspects of the background of its senior author Konstantin Popov make him uniquely suited to the job of intellectualizing electrometallurgy First he had as his mentor the great surely the leading electrochemist in Eastern Europe since the death of Frumkin Second he has had ample experience with the leading electrochemical engineer in America Ralph White

Fundamentals of Thermodynamics and Applications

Ingo Müller,Wolfgang H. Müller,2009-03-12 Thermodynamics is the much abused slave of many masters physicists who love the totally impractical Carnot process mechanical engineers who design power stations and refrigerators chemists who are successfully synthesizing ammonia and are puzzled by photosynthesis meteorologists who calculate cloud bases and predict f hn boraccia and scirocco physico chemists who vulcanize rubber and build fuel cells chemical engineers who rectify natural gas and distil f mented potato juice metallurgists who improve steels and harden surfaces trition counselors who recommend a proper intake of calories mechanics who adjust heat exchangers architects who construe and often misconstrue ch neys biologists who marvel at the height of trees air conditioning engineers who design saunas and the ventilation of air plane cabins rocket engineers who create supersonic flows et cetera Not all of these professional groups need the full depth and breadth of ther dynamics For some it is enough to consider a well stirred tank for others a s tionary nozzle flow is essential and yet others are well served with the partial d ferential equation of heat conduction It is therefore natural that thermodynamics is prone to mutilation different group specific meta thermodynamics have emerged which serve the interest of the groups under most circumstances and leave out aspects that are not often needed in their fields
