Azeiteiro,Sandra Caeiro,Fátima Alves,2014-09-13

Including considerations of sustainability in universities activities has long since become mainstream However there is still much to be done with regard to the full integration of sustainability thinking into science and engineering curricula Among the problems that hinder progress in this field the lack of sound information on how to actually implement it is prominent Created in order to address this need this book presents a wealth of information on innovative approaches methods and tools that may be helpful in translating sustainability principles into practice Knowledge-Based Intelligent Information and Engineering Systems Vasile Palade,2003-08-28 During recent decades we have witnessed not only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work While some 30 years ago the addition of a computer was considered only for routine and boring tasks in support of humans the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate The very fast pace of change in processor and information technology has been the main driving force behind this development Advances in automation and especially Artificial Intelligence AI have enabled the formation of a rather unique team with human and electronic members The team is still supervised by the human with the machine as a subordinate associate or assistant sharing responsibility authority and autonomy over many tasks The requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies These include methods for system analysis design and engineering and in particular for information processing for cognitive and complex knowledge 1 engineering **Infrastructure Management, Assessment and Rehabilitation** Sherif Yehia,Mahmoud Reda Taha,Akmal Abdelfatah,2021-11-30 This volume brings together state of the art research on the development of infrastructure management assessment and rehabilitation techniques It sheds light on pioneering work on innovative 3D printed concrete novel methods for assessment of bridge decks and advanced computer vision based maintenance of civil infrastructure The book is essential reading for infrastructure owners engineers and contractors allowing them to gain insights into groundbreaking research that is paving the way toward sustainable and resilient infrastructure
