

- (c) The histone tails of different regions of chromatin are covalently modified during the differentiation of cells in eukaryotic organisms. These modifications are added and removed by enzymes. The main effect of modifying histone tails is to attract specific proteins to a stretch of chromatin.

Fig.4.2 shows the action of one of these enzymes, histone methyl transferase.

Fig.4.2

- (i) Suggest, using Fig.4.2 and the information above, how histone methylation prevents transcription. [2]

Tutorial Tip!

- ✓ Analyse Fig.4.2 carefully and discuss the following:

1. Action of histone methyl transferase and its implication on the structure of chromatin and nucleosome.
2. Discuss how transcription is affected.

From Functional Genomics to Biotechnology in Ornamental Plants Swee-Suak Ko, Akira Kanno, Raquel Sánchez-Pérez, Hsin-Hung Yeh, Annette Hohe, Mariana Mondragón-Palomino, 2019-07-12 For centuries plants of a broad taxonomical background have been bred and commercialized because of the beauty of their flowers However until recently genomic analyses of ornamentals remained a challenge because of their large genome sizes and high ploidy levels In the last decade increasingly affordable sequencing technologies and powerful bioinformatic approaches resulted in the complete sequencing of several horticultural species genomes and the characterization of their transcriptomes These developments enabled research on many challenging topics This Research Topic gives you a primer into them by featuring a broad range of original research contributions on some of the most active areas of ornamental plant research the genetic basis of flower morphology scent and color the genetic regulation of physiology as well as the epigenetic factors affecting vegetative development In this context one of the most significant hurdles to functional genetic studies in ornamentals is achieving efficient genetic transformation Several articles in this Research Topic describe strategies to tackle this challenge and present insights into the way transgene activity renders novel flower phenotypes
