Prosser,2008 This book is the first to describe the history of geoconservation It draws on experience from the UK Europe and further afield to explore topics including what is geoconservation where when and how did it start who was responsible and how has it differed across the world Geological and geomorphological features processes sites and specimens provide a resource of immense scientific and educational importance They also form the foundation for the varied and spectacular landscapes that help define national and local identity as well as many of the great tourism destinations Mankind's activities including contributing to enhanced climate change pose many threats to this resource the importance of safeguarding and managing it for future generations is now widely accepted as part of sustainable development Geoconservation is an established and growing activity across the world with more participants and a greater profile than ever before This volume highlights a history of challenges set backs successes and visionary individuals and provides a sound basis for taking geoconservation into the future *International Catalogue of Scientific Literature, 1901-1914* ,1906 **International Catalogue of Scientific Literature** ,1904 Geotechnical Engineering for the Preservation of Monuments and Historic Sites III Renato Lancellotta,Carlo Viggiani,Alessandro Flora,Filomena de Silva,Lucia Mele,2022-06-14 The conservation of monuments and historic sites is one of the most challenging problems facing modern civilization It involves inextricable patterns factors belonging to different fields cultural humanistic social technical economical administrative and the requirements of safety and use appear to be or often are in conflict with the respect of the integrity of the monuments The complexity of the topic is such that a shared framework of reference is still lacking among art historians architects structural and geotechnical engineers The complexity of the subject is such that a shared frame of reference is still lacking among art historians architects architectural and geotechnical engineers And while there are exemplary cases of an integral approach

to each building element with its static and architectural function as a material witness to the culture and construction techniques of the original historical period there are still examples of uncritical reliance on modern technology leading to the substitution from earlier structures to new ones preserving only the iconic look of the original monument Geotechnical Engineering for the Preservation of Monuments and Historic Sites III collects the contributions to the eponymous 3rd International ISSMGE TC301 Symposium Naples Italy 22-24 June 2022 The papers cover a wide range of topics which include Principles of conservation maintenance strategies case histories The knowledge investigations and monitoring Seismic risk site effects soil structure interaction Effects of urban development and tunnelling on built heritage Preservation of diffuse heritage soil instability subsidence environmental damages The present volume aims at geotechnical engineers and academics involved in the preservation of monuments and historic sites worldwide

Anatomy of an Orogen: The Apennines and Adjacent Mediterranean Basins F. Vai, I. Peter Martini, 2013-12-21 This is the first book in English reviewing and updating the geology of the whole Apennines one of the recent most uplifted mountains in the world The Apennines are the place from which Steno 1669 first stated the principles of geology The Apennines also represent amongst others the finding testing sites of processes and products like volcanic eruptions earthquakes olistostromes and m. langes argille scagliose salinity crisis geothermal fluids thrust top basins and turbidites first represented in a famous Leonardo's painting As such the Apennines are a testing and learning ground readily accessible and rich of any type of field data A growing literature is available most of which is not published in widely available journals The objective of the book is to provide a synthesis of current data and ideas on the Apennines for the most part simply written and suitable for an international audience However sufficient details and in depth analyses of the various complex settings have been presented to make this material useful to professional scholars and to students of senior university courses

Submarine Landslides Kei Ogata, Andrea Festa, Gian Andrea Pini, 2019-11-20 An examination of ancient and contemporary submarine landslides and their impact Landslides are common in every subaqueous geodynamic context from passive and active continental margins to oceanic and continental intraplate settings They pose significant threats to both offshore and coastal areas due to their frequency dimensions and terminal velocity capacity to travel great distances and ability to generate potentially destructive tsunamis Submarine Landslides Subaqueous Mass Transport Deposits from Outcrops to Seismic Profiles examines the mechanisms characteristics and impacts of submarine landslides Volume highlights include Use of different methodological approaches from geophysics to field based geology Data on submarine landslide deposits at various scales Worldwide collection of case studies from on and off shore Potential risks to human society and infrastructure Impacts on the hydrosphere atmosphere and lithosphere

Record ,1901 Indexes the world s zoological and animal science literature covering all research from biochemistry to veterinary medicine The database provides a collection of references from over 4 500 international serial publications plus books meetings reviews and other no serial literature from over 100 countries It is the oldest continuing database of animal biology indexing literature published from 1864 to the present Zoological Record has long been recognized as the unofficial register for taxonomy and systematics but other topics in animal biology are also covered *Palaeoseismology* Klaus Reicherter,Alessandro M. Michetti,Pablo Gabriel Silva,2009 Given the tremendous toll in human lives and attendant economic losses it is appropriate that scientists are working hard to understand better earthquakes with the aim of forecasting and ultimately predicting them In the last decades increasing attention has been paid to the coseismic effects on the natural environment creating a solid base of empirical data for the estimation of source parameters of strong earthquakes based on geological observations The recently introduced INQUA scale Environmental Seismic Intensity ESI 2007 Scale of macroseismic intensity clearly shows how the systematic study of earthquake surface faulting coseismic liquefaction tsunami deposits and other primary and secondary ground effects can be integrated with traditional seismological and tectonic information to provide a better understanding of the seismicity level of an area and the associated hazards At the moment this is the only scientific means of equating the seismic records to the seismic cycle time spans extending the seismic catalogues even to tens of thousands of years improving future seismic hazard analyses This Special Publication covers some of the latest multidisciplinary work undertaken to achieve that aim Eighteen papers from research groups from all continents address a wide range of topics related both to palaeoseismological studies and assessment of macroseismic intensity based only on the natural phenomena associated with an earthquake *Zoological Record* ,1896 Zoological Record is published annually in separate sections The first of these is Comprehensive Zoology followed by sections recording a year s literature relating to a Phylum or Class of the Animal Kingdom The final section contains the new genera and subgenera indexed in the volume Each section of a volume lists the sections of that volume *The Shipley Collection of Scientific Papers* ,1925 *The Record of Zoological Literature* ,1899
